

Department of Mathematics

Syllabus

Semester: III

Course: Fourier Series, Transforms and Statistical Techniques

Course Code: 24MAE131 (Common to ECE, EEE & ME)

L:T:P:J	2:2:0:0	CIA : 50
Credits:	03	SEA : 50
Hours:	40	SEA Duration : 03 Hours

Course Learning Objectives: The students will be able to develop the theoretical and practical knowledge of Statistical methods, Laplace transform, Fourier series, Fourier transforms and Z-transforms in a comprehensive manner in various fields of engineering.

Module-1: Curve fitting & Statistical methods	No. of hours	Blooms cognitive Levels
<i>Examples from Engineering field that require curve fitting and statistical methods.</i> Curve Fitting: Curve fitting by the method of least squares-fitting the curves of the form: $y = ax+b$, $y = ax^2 + bx + c$ and $y = ax^b$. Statistical methods: Introduction to Moments, Skewness, Kurtosis and problems. Karl Pearson's coefficient of correlation and lines of regression. <i>Experiential Learning component: Problems on curve fitting and statistical methods</i>	L: 04 T: 04	L1 L2 L3
Module-2: Laplace Transform		
<i>Examples from Engineering field that require Laplace transforms.</i> Transformation for time domain to frequency domain. Definition and Laplace transforms of elementary functions (statements only). Laplace transform of $e^{at} f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, $\int_0^t f(t)dt$ and $f^n(t)$ (without proof). Laplace transforms of Periodic functions, unit-step function and unit impulse function. <i>Experiential Learning component: Finding the Laplace transforms of a function.</i>	L: 04 T: 04	L1 L2 L3
Module-3: Inverse Laplace Transform		
<i>Examples from Engineering field that require inverse Laplace transforms.</i> Definition and problems. Inverse Laplace transform using convolution theorem (without proof). Solution of linear differential equations and simultaneous differential equations. Applications to engineering problems. <i>Experiential Learning component: Problems on LCR Circuit.</i>	L: 04 T: 04	L1 L2 L3
Module-4: Fourier Series		
<i>Examples from Engineering field that require Fourier series.</i> Periodic functions, Introduction to Fourier Series, Dirichlet's condition. Fourier series of periodic functions with period 2π and arbitrary period. Half range Fourier sine and cosine series. Practical harmonic analysis over the interval $(0, 2l)$. <i>Experiential Learning component: Finding the Fourier series.</i>	L : 04 T : 04	L1 L2 L3
Module-5: Fourier Transforms & Z -Transforms		
<i>Examples from Engineering field that require Fourier Transforms & Z -Transforms.</i> Fourier Transforms: Fourier transform and properties-problems, Fourier sine and cosine transforms. Inverse Fourier transforms. Z-Transforms: Introduction to Z-transform, Z-transform of standard functions and properties (without proof). Initial value and final value theorems, problems. <i>Experiential Learning component: Finding the Fourier transforms & Z -Transforms of</i>	L : 04 T : 04	L1 L2 L3

Yashraj P.

Course Outcomes: After completing the course, the students will be able to

- CO 1: Apply the knowledge of correlation and regression analysis to fit a suitable mathematical model for the statistical data.
- CO 2: Apply Laplace transform technique to find the transformation from time domain to frequency domain.
- CO 3: Use inverse Laplace transform in solving differential equations arising in network analysis, control system and other fields of engineering
- CO 4: Demonstrate Fourier series to study the behavior of periodic functions and their applications in system communications, digital signal processing and field theory.
- CO 5: Apply the knowledge of Fourier transform and Z-transform to illustrate discrete / continuous function arising in wave and heat propagation, signals and systems.

Semester: III

Course Name: Network Analysis

Course Code: 24ECE132

L: T: P: J	2: 2: 0 :0	CIA Marks: 50
Credits:	3	SEA Marks: 50
Hours/Week (Total)	4	SEA Duration: 03 Hours

Pre-Requisites: Basic Electrical Concepts, Mathematical Preliminaries.

Course Learning Objectives: This course will enable students to:

1	Understand the basic network concepts, source transformation, mesh analysis, nodal analysis in analyzing the electrical circuits.
2	Gain the knowledge of various Network Theorems in analyzing the electrical circuits.
3	Introduce the behavior of networks subjected to transient conditions.
4	Use the applications of Laplace transforms to solve electrical circuits.
5	Study two port network parameters like Z, Y, h and T and their inter-relationships. Also, study the series and parallel resonance.

Module-1: Basic Concepts	No. of Hours	Blooms Cognitive Levels/CO Mapping
Basic Concepts, Classification of Electrical Networks, Source Transformation, Loop and Node analysis with linearly dependent and independent sources for DC and AC networks.	8	Apply CO1
Module-2: Network Theorems		
Superposition Theorem, Thevenin's and Norton's theorems, Maximum Power transfer theorem, Millman's Theorem. (Applicable only for independent sources only).	8	Apply CO2
Module-3: Transient Behavior and Initial Conditions		
Behavior of R, L, C components under switching conditions and their representations, evaluation of initial and final conditions in RL, RC and RLC circuits for DC excitations.	8	Apply CO3
Module-4: Laplace Transform and Its Applications		
Definition of Laplace transform, Laplace transform of Step, Ramp, Impulse functions, Initial and Final value theorem, solution of networks using Laplace transform, waveform Synthesis, solution of simple RL, RC, and RLC circuits for DC excitations using Laplace transforms.	8	Apply CO4
Module-5: Two Port Network Parameters		
Definition of Z, Y, h and Transmission parameters, modeling with these parameters, Network Analysis using of two port networks, Relationship between Parameters. Resonance: Series and parallel resonance, frequency response of series and parallel circuits, Q-factor, Bandwidth.	8	Apply CO5

Signature

Course Outcomes: After completing the course, the students will be able to	
24ECE132.1	Apply the concepts of source transformation, mesh analysis, and node analysis to solve and analyze the electrical circuits.
24ECE132.2	Apply network theorems such as Superposition, Thevenin's, Norton's, Maximum Power Transfer Theorem, and Millman's Theorem to solve and analyze the various electrical networks.
24ECE132.3	Evaluate the initial and final conditions in passive circuits and apply them for the RL, RC, and RLC electrical networks.
24ECE132.4	Apply and analyze the various electrical networks using Laplace transform.
24ECE132.5	Solve the given network using specified two port network parameters. Also, apply and analyze the concept of series and parallel resonance for RLC networks.
24ECE132.6	Apply and analyze the various applications of electrical networks.

~~Yashraj~~

Queues: Queues, linked representation of queues, dequeue		
Module-4: NON-LINEAR DATA STRUCTURES – TREES		
Teaching component: Trees: Introduction, Binary trees, representing binary trees in memory, traversing binary trees, binary search trees, searching and inserting in binary search trees, deleting in a binary search tree, AVL search trees.	No. of Hrs	Bloom's Taxonomy Levels
	8	L1, L2, L3
Module-5: GRAPHS, SORTING & SEARCHING		
Teaching component: Graphs and their applications: Introduction, Graph theory Terminology, linked representation of a graph, operation on graphs, traversing of graphs (Breadth-First Search, Depth first search) Sorting & Searching: Introduction, sorting, insertion sort, selection sort, merge sort, searching and data modification, hashing (hash functions only)	No. of Hrs	Bloom's Taxonomy Levels
	8	L1, L2, L3

Course Outcomes: After completing the course, the students will be able to	
24ECE133.1	Build knowledge on the importance of data structures, algorithms and time complexity computations.
24ECE133.2	Apply linear data structures to analyse and obtain solutions
24ECE133.3	Apply non-linear tree data structure to analyse and obtain solutions
24ECE133.4	Apply non-linear graph data structure to analyse and obtain solutions
24ECE133.5	Apply the concepts of sorting and searching to problem solving
24ECE133.6	Analyse real time practical problems and apply appropriate data structures to obtain efficient solutions

Semester: III

Course Name: Analog Electronics Circuits

Course Code: 24ECE134

L: T: P: J	3 : 0: 2 : 0	CIA Marks: 50
Credits:	4	SEA Marks: 50
Hours	40	SEA Duration: 03 Hours

Pre-Requisites: Physics and Electronics fundamentals

Course Learning Objectives: The students will be able to

- 1 Explain various BJT parameters, connections and configurations.,
- 2 Design and demonstrate the transistor amplifiers.
- 3 Explain various types of FET biasing and demonstrate the use of FET amplifiers.
- 4 Analyze Power amplifier circuits in different modes of operation.
- 5 Design op-amp for linear and non-linear applications

Module-1: BJT Biasing, Small Signal Operation and Modelling	No. of Hours	Blooms Cognitive Levels
Teaching component: Biasing in BJT amplifier circuits: The Classical Discrete circuit bias (Voltage-divider bias), Biasing using a collector to base feedback resistor. Small signal operation and Models: Collector current and transconductance, Base current and input resistance, Emitter current and input resistance, voltage gain, The hybrid Π model, and The T model.	8	Apply CO1
Module-2: : MOSFETs Biasing, Small signal operation and Modelling		
MOSFETs: Biasing in MOS amplifier circuits: Fixing V_{GS} , Fixing V_G , Drain to Gate feedback resistor. Small signal operation and modeling: The DC bias point, signal current in drain, voltage gain, small signal equivalent circuit models, transconductance, The T equivalent circuit model	8	Apply CO2
Module-3: MOSFET Amplifier		
MOSFET Amplifier configuration: Basic configurations, characterizing amplifiers, CS amplifier with and without source resistance R_S . MOSFET internal capacitances and High frequency model: The gate capacitive effect, Junction capacitances, High frequency model. Frequency response of the CS amplifier: The three frequency bands, high frequency response, Low frequency response.	8	Apply CO3
Module-4: Feedback Amplifier, Output Stages and Power Amplifiers		
Feedback Amplifier: General feedback structure, Properties of negative feedback, The Four Basic Feedback Topologies, The series-shunt, series-series, shunt-shunt, and shunt-series amplifiers (Qualitative Analysis). Stages and Power Amplifiers: Introduction, Classification of stages, Class A output stage, Class B output stage: Transfer characteristics, Power Dissipation, Power Conversion efficiency, Class at stage.	8	Apply CO4

Yashraj

Module-5: Op-Amp Circuits, 555 Timer and its applications		
Teaching component: Instrumentation Amplifier, DAC-weighted resistor and R-2R ladder, ADC- Successive approximation type, Small Signal half wave rectifier, Active Filters, First order low-pass and high-pass Butterworth filters, Band-pass filters, Band reject filters. 555 Timer and its Applications: Monostable and Astable Multivibrators.	8	Apply CO5

Lab Experiments (Lab sessions + 1 Lab Test)	
Sl. No	Experiments
1	Design and set up the BJT common emitter voltage amplifier without feedback and determine the gain-bandwidth product, input and output impedances.
2	Design and set up the FET common source voltage amplifier without feedback and determine the gain-bandwidth product, input, and output impedances.
3	Experiment to determine the Power efficiency of class C amplifier
4	Design Second Order Butterworth low pass filter using opamp
5	Design of Op- Amp as a comparator circuit
6	R-2R DAC
7	Simulation Experiment: Narrow Band-pass Filter
8	Simulation Experiment: Active second-order Butterworth high pass filters
9	Simulation Experiment: Monostable & Astable Multivibrator using 555 Timer
10	Simulation Experiment: Narrow band-reject filter

Course Outcomes: After completing the course, the students will be able to	
24ECE134.1	Design and analyze biasing circuits for BJTs amplifier circuits.
24ECE134.2	Design and analyze biasing circuits for FET amplifier circuits
24ECE134.3	Design and analyze FET common source amplifiers with different circuit configurations and biasing conditions.
24ECE134.4	Understand the feedback topologies and approximations in the design of amplifiers
24ECE134.5	Design of circuits using linear ICs for wide range applications such as ADC, DAC, filters and timers.
24ECE134.6	Design real-life application based on discrete Analog and linear IC circuits

Semester: III

Course Name: Digital System Design Using Verilog

Course Code: 24ECE135

L: T: P: J	3: 0: 2: 0	CIA Marks: 50
Credits:	4	SEA Marks: 50
Hours	40	SEA Duration: 03 Hours

Pre-Requisites: Digital Circuits

Course Learning Objectives: The students will be able to

- | | |
|---|---|
| 1 | Simplifying Boolean expression using K-map techniques and Quine-McCluskey minimization techniques |
| 2 | Designing and analyzing combinational logic circuits |
| 3 | Design methods and analysis of sequential logic circuits |
| 4 | Design of digital systems using Verilog HDL-data flow models |
| 5 | Design of digital systems using Verilog HDL behavioral and structural models |

Module-1: Principles of Combinational Logic	No. of Hours	Blooms Cognitive Levels/CO Mapping
Definition of combinational logic, Canonical forms, Generation of switching equations from truth tables, Karnaugh maps- up to 4 variables, Incompletely Specified Functions, Simplifying Maxterm equations, Quine-McCluskey Minimization Technique. Quine-McCluskey using Don't Care Terms. Lab: Simplify the given 3/4 variable Boolean expressions. and simulate the design using Verilog dataflow description.	10	Apply CO1
Module-2: Logic Design with MSI Components		
Binary Adders and Subtractors, Binary Subtractors, Carry Lookahead Adder, Comparators, Decoders, Logic Design using Decoders, Decoders with a enable input, Encoders, Multiplexers, Logic Design with Multiplexers. Lab: i. Design a Full Adder using two half adders and simulate using verilog structural Description. ii. Realize 32-bit ALU using Verilog Behavioral description. iii. Realize using Verilog Behavioral description: 3:8 decoder, 2-bit Comparator. iv. Realize using Verilog Behavioral description: 8:1 mux, 8:3 Priority encoder using FPGA board.	10	Apply CO2
Module-3: Flip-Flops and its Applications		
The Basic Bistable Element, Latches, SR Latch, An application of the SR Latch: A Switch Debouncer, S'R' Latch, Gated SR latch, Gated D Latch, The Master-Slave Flip-flops (Pulse Triggered flip-flops): MSSR flip-flops, MSJK flip flops, Setup and Hold time, Edge triggered flip flops, The positive edge triggered D flip flop, Negative edge triggered D flip flop, asynchronous inputs, Additional types of edge triggered flip flops, Characteristic equations, Registers, Binary Ripple Counters, Synchronous Binary Counters, Design of Synchronous mod-n Counter using J and D flip-flops.	10	Apply CO3

Yashraj

Lab: i. Realize using Verilog Behavioral description: Flip-flops: a) JK b) SR c) T d) D and verify the design using FPGA board. ii. Design 8-bit shift register for shift left and right operation using Verilog behavioral Description.		
Module-4: Finite State Machine and Verilog Data flow description		
Mealy and Moore Model, Construction of State Diagrams, Up-down decade counter, Sequence detectors (non overlapped sequence only). Note: Following topics are applicable to Verilog only. Structure of Verilog module, Operators, Data Types, Styles of Description, Behavioral Descriptions, Structural Description, Data flow Description, Highlights of Data flow description, Structure of Data flow description, Half adder, Multiplexer, 2X2 Array Multiplier, D latch, 2-bit Magnitude Comparator. Lab: Develop a Verilog Program to interface a Stepper motor to the FPGA and rotate the motor in the specified direction.	10	Apply CO4
Module-5: Verilog Behavioral and Structural description		
Half adder, Sequential statements, if statement, case statement, Edge triggered JKFF, 3 bit binary counter. Structural Descriptions, Organization of structural description, Half adder, 2x1 Multiplexer with active low enable, 2x4 decoder with tristate output, Full adder, SR Latch, 3 bit RCA. Lab: i. Design 4 bit Binary and BCD counters with synchronous and asynchronous reset using Verilog Behavioral description and verify the design using FPGA board. ii. Interface DAC to generate square and triangular waveform using Verilog program and implement into the FPGA board.	10	Apply CO5

Course Outcomes: After completing the course, the students will be able to

24ECE135.1	Apply Karnaugh maps and the Quine-McCluskey minimization technique to simplify Boolean functions.
24ECE135.2	Apply binary arithmetic and combinational logic principles to design circuits using adders, subtractors, comparators, decoders, encoders, and multiplexers.
24ECE135.3	Design Flip-Flops (SR, D, T, and JK) and synchronous sequential circuits based on their operation.
24ECE135.4	Design and develop Verilog dataflow descriptions for combinational (HA, Mux, Multiplier, Comparator) and sequential (D Latch) circuits.
24ECE135.5	Develop Verilog behavioral and structural descriptions for combinational (HA, FA, RCA, Dec, Mux) and sequential (SR Latch, Counter) circuits.
24ECE135.6	Analyze the behavior and functionality of combinational and sequential digital circuits to evaluate their performance and logical correctness.

Choice Based Credit System (CBCS and Outcome Based Education (OBE))

Semester: III		
Course Name: Advanced Python Programming on Raspberry Pi		Course Code: 23ECE136
L: T: P: J	0: 0 : 2 : 2	CIA Marks: 50
Credits:	2	SEA Marks: 50
Hours/Week	4	SEA Duration: 03 Hours
Pre-Requisites: Basic understanding of IoT Basic programming and Hardware knowledge Basic knowledge of Python Programming		
Course Learning Objectives: The students will be able to		
1	Demonstrate proficiency in integrating Raspberry Pi for IoT applications, focusing on sensor and actuator connectivity and GPIO management.	
2	Master the acquisition, processing, and analysis of IoT sensor data using Raspberry Pi platform.	
3	Identify sensor technologies for sensing real-world entities and understand the role of IoT in various domains of Industry	
4	Create cloud data visualization using Blynk, Firebase, ThingSpeak	
5	Design and implement effective IoT communication protocols such as MQTT, WiFi, and Bluetooth for secure and reliable data transmission.	
		No. of Hours Blooms Cognitive Levels/CO Mapping
Module-1:		
Raspberry Pi Architecture. Basic knowledge of Python programming, understanding of GPIO pins on Raspberry Pi, familiarity with Raspberry Pi's RPi.GPIO library for GPIO control. Downloading And Installing Raspberry Pi Raspberry Pi4 Board features, pinout, OS installation and configuration. Raspberry Pi4 GPIO programming, BCM Mode & Board pin numbering Programs/Lab experiment: 1. Write a Python program to interface LED and push button to Raspberry Pi. 2. Write a Python program to interface IR to Raspberry Pi.		5 APPLY
Module-2:		
7 segment Display, common anode and common cathode. Measuring distance using ultrasonic sensor Programs/Lab experiment: 1. Write a Python program to interface Seven Segment Display to Raspberry Pi. 2. Write a Python program to interface ultrasonic sensor to Raspberry Pi.		5 APPLY
Module-3:		
Interfaces (SPI and I2C) communication. RFID data module. Experiment:		5 APPLY

Yashraj

1. Interfacing 16 X 2 LCD to Raspberry Pi without using library and using library from Blynk		
2. Interfacing RFID RC522 to Raspberry Pi into Blynk or Firebase		
Module-4:		
Raspberry Pi camera module. Image acquisition in Raspberry Pi. Cloud computing: data visualization using Blynk, Firebase, ThingSpeak		
Programs/Lab experiment: 1. Write Image to ThingSpeak from Raspberry Pi with Python 2. Interface LED/ bulb using Raspberry Pi which can be controlled by Android based smart phone through Bluetooth	5	APPLY
Module-5:		
Flask framework for web development, Python file handling for data logging, format and timestamp data for file storage.		
Programs/Lab experiment: 1. Raspberry Pi Web Server using Flask to Control LEDs and display humidity and temperature sensed by DH11 2. Raspberry Pi with DHT11 Data Logger to a file.	5	APPLY
List of Sample Projects		
1. Develop a Real time application like a smart home with following requirements. If anyone comes at door the camera module automatically captures his image send it to the e-mail account of user or send notification to the user. Door will open after users' approval. 2. Develop an application for time lapse images using your Raspberry Pi board and create a timelapse camera for capturing such images (ex: using the Blinky add-on) and create a video. The students can use a Pi Camera for this project and combine it with your Pi board. 3. AI Assistant -You can create an AI assistant by using a Raspberry Pi as well. 4. Smart Home- Do Amazon Alexa and Google Home fascinate you? Then this project would be perfect for you. You can automate multiple home appliances by using Raspberry Pi. 5. Smart Parking system- to keep track of empty slots and show it at the entrance 6. Smart garbage bin- segregate and dump the waste in appropriate container using moisture sensor, 7. Smart Irrigation system: check for the soil moisture pH and other vital minerals and control the water and/or liquid fertilizers to plants. 8. Raspberry Pi Pico based Line Follower Robot 9. Tomato/other specific item Sorting Machine using Edge Impulse TinyML on Raspberry Pi 10. Automated Security System with Telegram Bot and Facial Recognition		

Course Outcomes: After completing the course, the students will be able to	
24ECE136.1	Integrate Raspberry Pi effectively to develop IoT solutions, demonstrating proficiency in sensor and actuator connectivity and GPIO management.
24ECE136.2	Acquire, process, and analyze IoT sensor data using Raspberry Pi, demonstrating mastery in data handling techniques.
24ECE136.3	Design and implement robust IoT communication protocols (e.g., MQTT, WiFi, Bluetooth) for secure and reliable data transmission in various IoT applications.
24ECE136.4	Use Raspberry PI for webserver communication and cloud data visualization
24ECE136.5	Apply a problem-solving approach to design and prototype practical IoT systems that address real-world challenges, showcasing innovation and technical competence.
	Collaborate in teams to plan, execute, and present comprehensive IoT projects, demonstrating effective communication, teamwork, and project management skills.

An Autonomous Institution under VTU

Semester: III		
COURSE: CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS		
Course Code: 24CIP137	L:T:P:J: 1:0:0:0	CIA Marks: 50
Credits:	1	SEA Marks: 50
Hours:	15 hrs	SEA Duration: 2Hrs
Course Learning Objectives: The students will be able to		
1	know the fundamental political codes, structure, procedures, powers, and duties of Indian government institutions, fundamental rights, directive principles, and the duties of citizens	
2	know the Indian top civil service positions and the exams conducted by UPSC and SPSC for the same	
3	Understand engineering ethics and their responsibilities; identify their individual roles and ethical responsibilities towards society.	
MODULE 1: Introduction to Indian Constitution		RBT
The Necessity of the Constitution, Introduction to Indian Constitution, The Making of the Constitution, Role of Constituent Assembly, Preamble and Salient features of the Constitution of India, Fundamental Rights and its Restriction and limitations in different complex situations, Directive Principles of State Policy, Fundamental Duties.		Hrs
		1,2,3
		3
MODULE 2: System of Government, Central Government, State Government		RBT
System of Government-Parliamentary System, Federal System. Central Government-Basic details, Powers and Functions of Union Executive. Parliament- LS and RS (Composition, Duration, Membership and Presiding officers of Parliament and their functions). Leaders in Parliament (Leader of the House and Leader of the Opposition). Sessions of Parliament (Summoning, Adjournment, Adjournment Sine Die, Prorogation, Dissolution). Quorum of House, Language in Parliament, Joint sitting of two Houses. State Government-Basic details, Powers and Functions of State Executive. State Legislature (Composition, Duration, Membership and Presiding officers of Parliament and their functions).		Hrs
		1,2,3
		3
MODULE 3: Judiciary, Amendments and Emergency Provisions		RBT
Supreme Court, High Court, Judicial Review, Judicial Activism. Methods in Constitutional Amendments (How and Why). Types of Emergencies and its Consequences, Recent Amendments to the Constitution.		Hrs
		1,2,3
		3
MODULE 4: Elections, Constitutional and Non Constitutional Bodies		RBT
Elections- Election Commission of India, Electoral Process. Constitutional Bodies- Election Commission, Union Public Service Commission, State Public Service Commission, Goods and Service Tax Council. Non Constitutional Bodies- Central Information Commission, State Information Commission.		Hrs
		1,2,3
		3

Signature

MODULE 5: Professional Ethics	RBT	Hrs
Scope & Aims of Engineering & Professional Ethics, Positive and Negative Faces of Engineering Ethics, Responsibilities in Engineering, the impediments to Responsibility. Trust and Reliability in Engineering, Risks, Safety and liability in Engineering, Clash of Ethics, IPRs (Intellectual Property Rights)	1,2,3	3

Course outcome: On completion of this course, students will be able to,
CO1: Have constitutional knowledge and legal literacy.
CO2: Have knowledge on All India Services and State Civil Services.
CO3: Understand Engineering and Professional Ethics and responsibilities of Engineers.

Syllabus for Softskills-1

SEMESTER – III

Subject Name	Softskills-1 (Soft skills for Industry & Quantitative Aptitude and Logical Reasoning)	Weekly Continuous Assessment Marks (6 tests)	Max 10 Min 4
Subject Code	24SFT138	Practice Tests for Internal Assessment Marks (6 tests)	Max 15 Min 6
Number of Contact Hours/Week	2	Final Assessment Marks (during 3rd test on Tab MCQ)	Max 25 Min 10
Total Number of Contact Hours	24	Credits	1
1. Understanding Corporate Communication: (2hrs)	Define corporate communication and its importance. Identify key stakeholders in corporate. Understand workplace etiquette: communication tone, addressing colleagues, and handling conflicts. Resume Writing.		
2. Cross Culture Sensitivity: (2hrs)	Knowledge, awareness and acceptance of other cultures/caste/creed. Being of oneness and understanding the work environment.		
3. Effective Communication and Interpersonal Skills (2hrs)	Skills we use daily when we communicate and interact with other people, both individually and in groups. Active listening, right response and clear message. Conduct mock presentations on technical topics relevant to engineering.		
4. Collaboration and Team Communication: (2hrs)	Participate in team-based activities and projects to practice collaboration. Understanding types of Leadership and inculcating leadership skills		
5. Written Communication (2hrs)	Passage / Email writing Identify your goal. Before you write an email, ask yourself what you want the recipient to do after they've read it. Writing technical documentation and reviews		
6. Goal Setting & Mind Mapping (2hrs)	Development of an action plan designed to motivate and guide a person or group toward a goal. Gives one's life direction and boosts your motivation and self-confidence. Developing career Action plans		
 7. Quantitative Aptitude - 1(6hrs)	Speed Math : Number System, Multiple and factors, Divisibility Rules HCF & LCM, Squares and Cubes, BODMAS & Tables, Approximation, Decimals, Fractions, Surds & Indices		
	Profit & Loss - Concepts of SP, CP, Profit, Loss, Gain or Loss %. Marked Price & Discount problems, Successive Selling Tye, Discount		
	Percentages – Percent to Decimal or Fraction Conversion, Inverse Case – Value From Percentage, relative Percentage, Successive Selling type, Dishonest Dealings, partnerships		
	Averages - Understanding Averages, relevance, meaning, properties of average, deviation method, weighted average, & solving problems.		

8. Logical Reasoning - 1 (6hrs)	Logical Aptitude – Syllogism, Venn diagram method, three statement syllogism, deductive and inductive reasoning, introduction to puzzle and games organizing information, parts of an argument, common flaws, arguments and assumptions.
	Coding & Decoding – Letter Coding, Number coding, symbol coding, Crypt arithmetic – basic concepts, addition, subtraction, multiplication of coded alphabets, types of cryptarithmic Concept of EJOTY, Opposite Letter, Reversing the alphabets. Jumbling of Letter, Finding Codes of Derivatives.
	Image Analysis - Paper cutting & Folding, Mirror & Water Image, Cubes and Dice, Analogy, Find the odd one out, Rule Detection. Cubes and dice
	Series Completion - Basics of Next no, Missing no and Wrong no and problemson that. Solving various types of Letter series and understanding different types.
	Odd Man Out - Following certain patterns and groups. Identifying the errors/odd one in the group.
	Visual sequence, visual analogy and classification, single & multiple comparisons, linear sequencing
	Logical Puzzles - K-level thinking, Arithmetic Puzzles and stick puzzles

Mahayashini

Department of Mathematics Syllabus

Semester: IV		
Course: Complex Analysis, Probability and Random Process		
Course Code: 24MAE141 (Common to ECE, EEE & ME)		
L:T:P:J	2:2:0:0	CIA :50
Credits:	03	SEA : 50
Hours:	40	SEA Duration: 03 Hours
Course Learning Objectives: The students will be able to		
1 Provide an insight into applications of complex variables and conformal mapping arising in potential theory, quantum mechanics, heat conduction and field theory.		
2 Develop the knowledge of probability, joint probability distribution and Random process occurring in digital signal processing, design engineering and microwave engineering.		
Module-1: Complex Analysis		Blooms cognitive Levels
<i>Examples from Engineering that require complex analysis.</i> Review of function of a complex variable, limits, continuity and differentiability. Analytic functions. Cauchy-Riemann equations in Cartesian and polar forms. Consequences of Cauchy-Riemann equations (only statement), construction of analytic function using Milne-Thomson method. <i>Experiential Learning component: Problems on construction of analytic functions</i>		L1 L2 L3
Module-2: Conformal Mapping & Complex Integration		
<i>Examples from Engineering that require Conformal Mapping & Complex Integration.</i> Conformal mapping: Introduction, discussion of transformations: $w = e^z$, $w = z^2$, $w = z + \frac{1}{z}$ ($z \neq 0$). Bilinear transformations. Complex integration: Introduction to complex integration, Cauchy's theorem and Cauchy's integral formula. Poles and residues, Taylor series, Laurent series and Residue theorem (without proof) <i>Experiential Learning component: Problems on Cauchy's integral formula</i>		L1 L2 L3
Module-3: Probability Distributions & Joint probability distribution		
<i>Examples from Engineering that require Probability and Joint probability distribution.</i> Probability Distributions: Review of basic probability theory. Discrete and continuous Random variables, probability mass/density functions (definitions only). Binomial, Poisson, exponential and normal distributions (without proof). Joint probability distribution: Joint Probability distribution for two discrete random variables, expectation, covariance and correlation. <i>Experiential Learning component: Problems on Binomial, Poisson, Exponential and Normal distributions</i>		L1 L2 L3
Module-4: Random Process		
<i>Examples from Engineering that require random process.</i> Introduction, classification of random process, methods of description of a random process, stationary, auto-correlation function, Ergodicity, Spectral representation, Weiner-Kinchine theorem, Poisson process, pure birth process, birth and death process with a linear rate. <i>g component: Problems on Poisson process, pure birth process</i>		L1 L2 L3

Yashraj

Module-5: Markov Chain & Sampling Theory											
<i>Examples from Engineering that require Markov Chain and Sampling Theory.</i> Markov Chain: Introduction to Stochastic process, Probability vectors, Stochastic matrices, Regular stochastic matrices, Markov Chains, Higher transition probabilities, Stationary distribution of Regular Markov chains and absorbing states, Markovian processes. Sampling Theory: Introduction to sampling theory, Testing of hypothesis, level of significance, confidence limits, test of significance of mean and difference of means for large samples-z-test, test of significance of small samples-Student's t- distribution. <i>Experiential Learning component: Problems on Markovian processes and, Sampling Theory</i>										L: 04 T: 04	L1 L2 L3
Course Outcomes: After completing the course, the students will be able to CO1: Use the concepts of analytic function and complex potentials to solve the problems arising in electromagnetic field theory. CO2: Utilize conformal mapping and complex integral arising in aerofoil theory, fluid flow visualization and image processing. CO3: Apply discrete and continuous probability and joint probability distributions in analyzing the probability models arising in engineering field. CO4: Use the concepts of random process in dealing with signals in engineering problems. CO5: Use Markov chain in prediction of future events and demonstrate the validity of testing the hypothesis.

Yashraj

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS and Outcome Based Education (OBE))		
Semester: IV		
Course Name: Digital Signal Processing (Professional Core Course)		
Course Code: 24ECE142		
L: T: P: J	3 : 2 : 0 : 0	CIA Marks: 50
Credits:	4	SEA Marks: 50
Hours/Week (Total)	5 hrs/week (50)	SEA Duration: 03 Hours
Course Learning Objectives: The students will be able to		
1	To discuss continuous and discrete-time signals and systems, their properties, representations, and methods that are necessary for the analysis of continuous and discrete-time signals and systems.	
2	To develop the mathematical and computational skills needed in application areas like communication, signal processing, and control, which will be taught in other courses.	
3	Understand the concept of Z-transforms, and Discrete time Fourier transforms.	
4	Design digital FIR filters and IIR filters.	
Module-1:		No. of Hours
Introduction and Classification of Signals: Definition of signal and Classification of signals Basic Operations on signals: Amplitude scaling, addition, multiplication, Differentiation, and Integration of signals. Time scaling, time shift, and time reversal. Elementary signals/functions: Exponential, sinusoidal, step, impulse, ramp functions, triangular, and rectangular pulse.		10
		Apply CO1
Module-2:		
System and its properties: Definition of system, Linear-nonlinear, Time variant-invariant, causal-noncausal, static-dynamic, Stable and Unstable Systems. Impulse response representation of LTI Systems: Convolution Sum & Convolution Integral (combination of Unit Step and Exponential). Properties of Impulse response representation for LTI systems.		10
		Apply CO2
Module-3:		
Z-Transforms: Definition, Basic problems, Region of Convergence, Inverse Z Transform (Partial Fraction Method only). Properties of aperiodic Signals: Introduction to DTFT, Basic problems, Properties (Linearity, Time Shift, Differentiation in the Frequency Domain).		10
		Apply CO3

Yashraj P. S.

Module-4:		
IIR Filters: Introduction to IIR filters, Bilinear Transformations, Design of Analog and Digital Butterworth filters (low-pass and high-pass). Realization of IIR filter structure (Direct form I & form II, Cascade, Parallel).	10	Apply CO4
Module-5:		
FIR Filters: Introduction to FIR filters, Frequency response of ideal digital low pass filter, high pass filter, Windowing design of FIR filters using Rectangular, Hanning, Hamming, Blackmann & Bartlett windows. FIR filter realization using Direct form and linear phase structure.	10	Apply CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE142.1	Classify the signals as continuous/discrete, periodic/apperiodic, even/odd, energy/power, and deterministic/random signals.
24ECE142.2	Determine the linearity, causality, time-invariance, and stability properties of continuous & discrete-time systems and compute convolution.
24ECE142.3	Represent signals in the frequency domain using Z-Transforms and DTFT.
24ECE142.4	Develop and realize the transfer function of IIR filters
24ECE142.5	Develop and realize the transfer function of FIR filters.
24ECE142.6	Interpret the signals and systems used in the different areas of application.

Semester: IV

Course Name: Control Systems

Course Code: 24ECE143

L: T: P: J	1: 2: 2 :0	CIA Marks: 50
Credits:	3	SEA Marks: 50
Hours	40	SEA Duration: 03 Hours

Pre-Requisites: Basic Electrical, Mathematical Preliminaries

Course Learning Objectives: The students will be able to

- | | |
|---|---|
| 1 | Understand the terminologies of control systems and mathematical modelling of electrical and mechanical system. |
| 2 | Determine the transfer function from block diagram and signal flow graph |
| 3 | Find time response from Transfer Functions |
| 4 | Analyze the stability of a system in time and frequency domain |

Module-1: Introduction to Control Systems

**No. of
Hours**

**Blooms
Cognitive
Levels**

Introduction to Control Systems: Definitions, Classification of control systems open loop and closed loop, linear and nonlinear, time variant and time invariant, continuous and discrete time systems. Block diagram of a typical open loop and closed loop control system. The transfer function concept, transfer function of simple electrical networks. Mathematical Modeling and Representation mechanical translational, rotational systems and electrical system. Analogous Systems.

8

**Apply
CO1**

Module-2: Block diagram algebra and Signal Flow graph

Block diagram algebra, Signal Flow graph: Block Diagram Reduction, Signal Flow Graphs, Mason's Gain Formula (No Proof), Conversion from electrical circuit to SFG and Block diagram to SFG.

8

**Apply
CO2**

Module-3: Time Response of Feedback Control Systems

Time Response of Feedback Control Systems: Standard test signals, step response of first and second order systems, time domain specifications. Type and order of the system, Steady state error and static error constants. Concepts for P, PD, PI and PID Controllers.

8

**Apply
CO3**

Module-4: Time Domain Analysis

Stability Analysis: Concept of stability, R H criterion, applications of R H criterion with limitations.

Root locus technique: Introduction to root locus concepts, Construction rules, Analysis of stability by root locus plot

8

**Apply
CO4**

Module-5: Frequency Domain Analysis

analysis: Correlation between frequency response . Frequency domain specifications, concept of phase gain, Introduction to frequency domain plots. Polar and Bode plots.

8

**Apply
CO5**

Maheshwari

Practical Experiments	
Sl. No	
1	Determination of transfer function of electric/ mechanical System.
2	Determine the transfer function for given closed loop system in block diagram representation.
3	Time Response of First order system.
4	Time response of Second order system.
5	Stability Analysis Based on Pole Position.
6	Effect of Loop Gain of negative feedback system on stability.
7	To reduce steady state error of a system.
8	Create root locus for a given transfer function.
9	To observe effect of the PID parameters on the closed loop dynamics.
10	Stability Analysis of system using Bode Plot.
Course Outcomes: After completing the course, the students will be able to	
24ECE143.1	Develop the mathematical model of mechanical, electrical systems and transfer function for a given control system
24ECE143.2	Develop transfer function using block diagram reduction and signal flow graph techniques.
24ECE143.3	Determine the time domain specifications for first and second order system
24ECE143.4	Determine the stability of a system in time domain using Routh-Hurwitz criterion and Root locus technique.
24ECE143.5	Determine the stability of a system in the frequency domain using Polar and bode plots.
24ECE143.6	Explain the method of conserving energy using closed loop control system.

Dept. of Electronics and Communication Engineering

Choice Based Credit System (CBCS) and Outcome Based Education (OBE)

Semester: IV

Course Name: ARM Microcontroller & Its Application

Course Code: 24ECE144

L: T: P: J	3: 0: 2: 0	CIA Marks: 50
Credits:	4	SEA Marks: 50
Hours	40	SEA Duration: 03 Hours

Pre-Requisites: Basic knowledge of Microcontroller/Microprocessor

Course Learning Objectives: The students will be able to

- | | |
|---|---|
| 1 | Understand the architectural features of 32-bit microcontroller ARM Cortex M3. |
| 2 | Program ARM Cortex M3 using the instructions set and C language for different applications. |
| 3 | Describe the memory systems, bus interface unit, exceptions of ARM Cortex M3. |

Module-1: ARM-32-bit Microcontroller	No. of Hours	Blooms Cognitive Levels
Architecture of ARM Cortex M3, Various Units in the architecture, General Purpose Registers, Special Registers, Exceptions/ Interrupts, The Built-In Nested Vectored Interrupt Controller, Stack operation, Operation Modes. Lab: 1a. Write ALP to find the sum of first 10 integer numbers 1b. Write ALP to multiply two 32-bit binary numbers 2. Write ALP to find determine whether the given 32-bit is even or odd	10	Apply CO1
Module-2: ARM Cortex M3 Instruction Sets and Programming-Part 1		
ARM Cortex M3 Instruction, Assembly basics, General Data-Processing Instructions, Bit Field instructions, IF THEN instructions, Saturation Operations. Lab: 3. Write ALP to set/clear the 3rd bit of a given 32-bit number. 4. Write ALP to check if a 32-bit number in R0 is negative and perform Sign extension to 32-bit using IT and ORR.	10	Apply CO2
Module-3: ARM Cortex M3 Instruction Sets and Programming-Part 2		
Memory Access instructions, Branch control instructions, Combined Compare and Conditional Branch, Typical Development Flow, CMSIS, Programing in C - Toggle an LED. Lab: 5a. Write ALP to store data in the RAM 5b. Write ALP to find the largest number in an array	10	Apply CO3
Module-4: Memory Systems of Cortex-M3		
Memory Maps, Memory Access Attributes, Bit-Band Operations, The Pipeline, A Detailed Block Diagram, Bus Interfaces on the Cortex-M3, The I-Code Bus, The D-Code Bus, The System Bus, The External PPB, The DAP Bus Lab: 6a. Write ALP to demonstrate bit-band operations in SRAM location using the bit-band alias region. 6b. Write ALP to demonstrate pipelining. 7a. Write embedded C program to interface a simple switch and display its status through Relay, Buzzer and LED. 7b. Write embedded C program to interface a Stepper motor and rotate it in clockwise and anti-clockwise direction.	10	Apply CO4
Module-5: Exceptions in Cortex M3		

Exception Types, Definitions of Priority, Vector Tables, Interrupt Inputs and Pending Behaviour, Fault Exceptions, Bus Faults, Memory Management Faults, Usage Faults, Hard Faults, Dealing with Faults, Supervisor Call and Pendable Service Call Lab: 8. Display the Hex digits 0 to F on a 7-segment LED interface, with an appropriate delay in between. 9. Interface a DAC and generate Triangular and Square waveforms. 10. Toggle the LED when an external interrupt occurs	10	Apply CO5
---	-----------	----------------------

Course Outcomes: After completing the course, the students will be able to

24ECE144.1	Utilize the knowledge of ARM Cortex-M3 architecture to use general-purpose, special registers, stack and on chip blocks.
24ECE144.2	Develop assembly language programs for embedded applications using instruction set (data-processing, bit-field, if-then, saturation).
24ECE144.3	Apply knowledge of branching, memory access, embedded C and CMSIS framework to create simple embedded applications using ARM Cortex-M3.
24ECE144.4	Employ the principles of memory mapping, access attributes, bit-band operations, pipelining, and bus interfaces to optimize data handling and control.
24ECE144.5	Apply the concepts of interrupt priorities, vector tables, faults, supervisor calls to implement effective exception handling.
24ECE144.6	Design Embedded system using ARM CortexM3 for Societal needs, Health care, Home application.

Yashraj

B.N.M. Institute of Technology

An Autonomous Institution under VTU
Dept. of Electronics and Communication Engineering
Choice Based Credit System (CBCS and Outcome Based Education (OBE))

Semester: IV

Course Name: Analog and Digital Communication (Integrated Laboratory)

Course Code: 24ECE145

L: T: P: J	3:0:2:0	CIA Marks: 50
Credits:	4	SEA Marks: 50
Hours/Week (Total)	50 hours	SEA Duration: 03 Hours

Pre-Requisites: Fourier Transform, Basics of Signals and systems

Course Learning Objectives: The students will be able to

1	Understand and analyze concepts of Analog Modulation schemes viz; AM, FM techniques.
2	Understand and analyze concepts digitization of signals viz; sampling, quantizing, and encoding.
3	Understand the concept of signal processing of digital data and signal conversion to symbols at the transmitter and receiver.
4	Understand the concepts of waveform coding for Base-band Transmission of digital signals.
5	Understand and analyze the concepts of Digital Modulation schemes and compute performance metrics of bandlimited channel.

Module-1: AMPLITUDE MODULATION

AMPLITUDE MODULATION: Introduction, Communication Block diagram, Need for Modulation, Amplitude Modulation: Time & Frequency Domain description, switching modulator, Envelop detector.		No. of Hours	Blooms Cognitive Levels
DOUBLE SIDE BAND-SUPPRESSED CARRIER MODULATION: Time and Frequency Domain description, Ring modulator Coherent detection, Costas Receiver, Frequency Translation.		10	Apply CO1

Module-2: ANGLE MODULATION

ANGLE MODULATION: Basic definitions, Frequency Modulation: Narrow Band FM, Wide Band FM, the Transmission bandwidth of FM Signals, Generation of FM Signals, Demodulation of FM Signals, FM Stereo Multiplexing, Phase-Locked Loop: Linear model of PLL. Figure of Merit of FM receiver	10	Apply CO2
---	----	-----------

Module-3: SAMPLING AND QUANTIZATION

Introduction, Why Digitize Analog Sources? The Low pass Sampling process, Pulse Amplitude Modulation, Time Division Multiplexing, Pulse-Position Modulation, Generation of PPM Waves, Detection of PPM Waves, Quantization Random Process, Quantization Noise.	10	Apply CO3
--	----	-----------

Module-4: BASE-BAND TRANSMISSION OF DIGITAL SIGNALS

Pulse-Code Modulation: Sampling, Quantization, Encoding, Regeneration, Decoding, Filtering, Multiplexing; Delta Modulation. Base-band transmission of Digital Signals: Baseband pulse, Pulse Shaping and Matched Filter Detection, Intersymbol interference (qualitative at	10	Apply CO4
---	----	-----------

1 DIGITAL MODULATION TECHNIQUES

Amplitude shift keying, Frequency shift keying, Binary Phase shift keying; Generation and detection with constellation diagram; Performance analysis; Power and Bandwidth; Bit error rate. (qualitative analysis)	10	Apply CO5
---	----	--------------

Course Outcomes: After completing the course, the students will be able to

24ECE145.1	Derive the time-domain and frequency domain representation of Amplitude modulation.
24ECE145.2	Derive the time-domain and frequency domain representation of Frequency modulation.
24ECE145.3	Compute the performance of pulse modulation schemes with quantization noise.
24ECE145.4	Apply the concepts of waveform coding for Base-band Transmission of digital signals.
24ECE145.5	Compute the performance of digital modulation schemes over the noisy channel.
24ECE145.6	Apply and develop the functional blocks of signal processing and communication applications.

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS and Outcome Based Education (OBE))			
Semester: 4			
Course Name: Signal Processing Applications using MATLAB (Theory +Lab + Mini Project) CourseCode:24ECE146			
L:T:P:J		0:0: 2:2	CIAMarks:50
Credits:		2	SEAMarks:50
Hours/Week (Total)		12 Lab sessions + 12 sessions for project	SEADuration:03Hours
Pre-Requisites: Signals and Systems and DSP Fundamentals			
CourseLearning Objectives:Thestudentswillbeable to			
1	Simulate continuous time, discrete time signals and verify sampling theorem using MATLAB.		
2	Perform computation of DFT and convolution along with the verification of their properties.		
3	Perform operations and transformations on Images.		
4	Compute and display the filtering operations and compare with the theoretical values.		
5	Able to use Simulink platform to verify the properties of a system.		
		No. of Hours	Blooms Cognitive Levels
1. Plot discrete and continuous time waveforms like rectangular pulse, square wave, triangular pulse, triangular wave, impulse, step, and ramp signal.		2	Apply CO1
2. Computation of Linear convolution of two given sequences. Prove commutative, distributive, and associative property of convolution.		2	Apply CO1, CO2
3. Theory: Discrete Fourier Transform (DFT): Frequency domain sampling, The Discrete Fourier Transform, DFT as a linear transformation, Properties of the DFT: Periodicity, Linearity, Multiplication of two DFTs and Circular Convolution. Necessity for efficient computation of DFT, Radix-2 Fast Fourier Transform (FFT) algorithm for DFT computation. Radix-2 FFT algorithm for computation of Inverse Discrete Fourier Transform (IDFT)		5	Apply CO2
4. Computation of N point DFT of a given sequence and to plot magnitude and phase spectrum.		2	Apply CO2
5. Introduction to Image processing toolbox. Perform basic image processing operations like add, subtract, complement, and crop.		2	Apply CO3

Handwritten signature

6. Perform the following operations on images: image enhancement, and thresholding on a given gray scale image.	2	Apply CO3
7. Design and implementation of Low pass IIR filter to meet the desired specifications.	2	Apply CO4
8. Design and implementation of Low pass FIR filter to meet the desired specifications.	2	Apply CO4
9. Checking Linearity/Non-Linearity of a system using SIMULINK	2	Apply CO5
10. Checking Time variance/invariance of a system using SIMULINK	2	Apply CO5

Mini Project

One mini project to be completed in 12 lab sessions including its evaluation.

Sample Mini Projects

1. Light Animation using Arduino and MATLAB.
2. Fruit identification.
3. Vehicle number plate detection.
4. Simulation of power plant.
5. Hybrid electric vehicle modeling.
6. Image processing using MATLAB.
7. Improve speech communication in the car.
8. Remove noise from the voice signal.

Course Outcomes: After completing the course, the students will be able to	
24ECE146.1	Demonstrate sampling theorem and plot elementary waveforms in continuous and discrete time domains.
24ECE146.2	Analyze and plot the signals using DFT and convolution.
24ECE146.3	Perform basic operations on images.
24ECE146.4	Apply filtering techniques on audio/speech signals.
24ECE146.5	Build a system to verify the properties of a given system using SIMULINK.
24ECE146.6	Design real time application in speech/audio/image processing.

Syllabus

Course Name: Soft Skill – II

Sub Code: 24SFT148

Semester: IV Semester

Year of Study: 2025-26

Total Number of Contact Hours: 30

Credits: 1

Total marks (CIA only): 100

Course Objectives: This course will enable students to

- understand the techniques to solve aptitude problems under logical & quantitative sections.
- develop thinking ability to solve complex problems.
- to solve company simulated aptitude papers related to campus recruitments.

Module 1 (Logical Reasoning)	Ages & Blood Relation - Generation Tree, Family Tree Problems, Statement Based Questions, Coded Blood Relation Question, Blood Relation Based Puzzles.
	Seating Arrangement - Single or Double rows facing each other or away from each other in the same direction Circular Seating Arrangement · Uni- & Bi-directional problems on · Circular, Square, Rectangular, Hexagonal tables
	Distance & Direction - Distance and Displacement between any two points as well as puzzles based on that, Concept of Shadows.
	Clocks & Calendars - Understanding concepts and basic formula along with solving different types of problems.
	Probability - Single event probability, multi event probability, independent events and dependent events, mutually exclusive events, non-mutually exclusive events, combination method for finding the outcomes.
	Analogies - Drawing similarity between different but sufficiently similar events, situations, or circumstances using tips and tricks, find the odd one out, rule detection,
	Ratio and Proportion · Simple Ratios, Compound Ratios · Comprehend and Dividend · Direct & Indirect Proportions · Problems on ages,

Module 2 (Quantitative Aptitude)	Mixtures & Alligation – technique, general representation, the straight-line approach, application of weighted allegation methods in problems involving mixtures, application of allegation on situations other than mixtures problems & Coin problems.
	Data Interpretation – Simple arithmetic, rules for comparing fractions, calculating(approximation)fractions, shortcut ways to find the percentages, Classification of data tables, Bar Graph, Tabular Form, Line Chart, case let Form. Pie Chart, Radar/Web, combination of graphs, combination of graphs and tables. and Missing Data Interpretation.
	Simple interest and Compound Interest - Simple Interest, Basic Difference b/w both the Interests. Mixed interest, CI with a Fractional Rate, to find Installments of both SI and CI.
	- Relative speed, Average speed, Problems on Races when somebody gives a start to other Person. Persons moving opposite & same direction in circular track, problems on train, Boat & Stream,
	Permutation & Combination - Arrangement, law of addition & multiplication, factorial Speed, Time & Distance function, concept of step arrangement, permutation of similar things, circular things, find the rank of word in dictionary. Concepts of selections using combination.
	Time & Work - Partial work done problems Work done on Alternate days. Problems related to efficiency. Division of Wages According to Work. Work & wages, pipes & cisterns

Course Outcome: (CO)

By end of the course the students will be able to:

1. identify and categorize problems under various sections of aptitude, reasoning & quantitative.
2. apply the appropriate techniques to solve reasoning related problems.
3. apply the appropriate techniques to solve quantitative related problems.
4. analyze the problem and solve it within the allocated time span.
5. implement out of the box solutions for complex problems.
6. answer company simulated aptitude papers related to campus recruitments.

CO-PO/PSO Mapping:

CO No.	Statement	Bloom's Cognitive level	POs
1	identify and categorize problems under various sections of aptitude, reasoning & quantitative	Analyze	PO1, PO2 & PO11
2	apply the appropriate techniques to solve reasoning related problems	Apply	PO1 & PO2
3	apply the appropriate techniques to solve quantitative related problems	Apply	PO1 & PO2

4	analyze the problem and solve it within the allocated time span	Analyze	PO1 & PO2
5	implement out of the box solutions for complex problems	Apply	PO1, PO2 & PO11
6	answer company simulated aptitude papers related to campus recruitments	Apply	PO1 & PO2

Strength of CO Mapping to PO/PSOs:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
1	2	2									2
2	2	2									
3	2	2									
4	2	2									
5	2	2									2
6	2	2									

List of Innovative teaching methods (if any):

- Quiz – logical questions, GK, crossword, etc.
- Problems based learning through discussion.
- Enquiry and evaluation-based learning.
- Blended learning (Classroom teaching, Presentation based teaching and activity-based learning)

Teaching methodologies:

- Classroom Teaching
- Quizzes and Discussions
- Mock Sessions
- Content related activities
- Organizing group wise discussions connecting to placement activities.
- Hands-on practice on topics.

Assessment processes:

CIA (100)	Components	Description	Maximum Marks to be Scored	Minimum Marks to be Scored
	Daily Assignments	Daily assignments should be conducted on the topics completed every day. After training weekly tests to be given	50	20

	Final Assessment	Final MCQ's Test to be conducted in College	50	20
	Total Marks for the Course		100	40

Assessment plan:

CO (Cognitive Level)	Daily Assessments	Final Assessment
CO-1 (Analyze)	Analyze	Analyze
CO-2 (Apply)	Apply	Apply
CO-3 (Apply)	Apply	Apply
CO-4 (Analyze)	Analyze	Analyze
CO-5 (Apply)	Apply	Apply
CO-6 (Apply)		Apply

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS and Outcome Based Education (OBE))			
Semester: V			
Course Name: Digital Image Processing		Course Code: 24ECE151	
L: T: P: J	3 : 0 : 0 : 0	CIA Marks: 50	
Credits:	3	SEA Marks: 50	
Hours/Week (Total)	3	SEA Duration: 03 Hours	
Course Learning Objectives: The students will be able to			
1	Understand the fundamentals of Digital Image Processing.		
2	Explain the image enhancement techniques both in the Spatial and Frequency Domain.		
3	Explain the Restoration techniques used in Digital image processing.		
4	Understand the Color and Morphological Image Processing methods.		
5	Understand the techniques for Segmentation and Representation of gray scale Images.		
Module-1: Digital Image Fundamentals		No. of Hours	Blooms Cognitive Levels
Digital Image Fundamentals: What is Digital Image Processing?, Origins of Digital Image Processing, Examples of fields that use DIP, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Elements of Visual Perception, Image Sensing and Acquisition, Image Sampling and Quantization, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.		8	Apply CO1
Module-2: Filtering in the Spatial and Frequency Domain			
Spatial Domain: Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters Frequency Domain: Preliminary Concepts, The Discrete Fourier Transform (DFT) of Two Variables, Properties of the 2-D DFT, Filtering in the Frequency Domain, Image Smoothing and Image Sharpening Using Frequency Domain Filters, Selective Filtering		8	Apply CO2
Module-3: Restoration			
Restoration: Noise models, Restoration in the Presence of Noise Only using Spatial Filtering and Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering.		8	Apply CO3
Module-4: Color and Morphological Image Processing			
Color Image Processing: Color Fundamentals, Color Models, Pseudocolor Image Processing. Morphological Image Processing: Preliminaries, Erosion and Dilation, Opening and Closing, The Hit-or-Miss Transforms.		8	Apply CO4
Module-5: Segmentation, Representation and Description			
Segmentation: Point, Line, and Edge Detection, Thresholding, Region-Based Segmentation Representation and Description: Representation, Boundary descriptors, Regional Descriptors		8	Apply CO5

Handwritten signature

Course Outcomes: After completing the course, the students will be able to	
24ECE151.1	Understand image formation and the role human visual system plays in perception of gray and color image data.
24ECE151.2	Apply image processing techniques in both the spatial and frequency (Fourier) domains.
24ECE151.3	Apply image Restoration techniques in the spatial domain.
24ECE151.4	Apply image processing techniques for Color and Morphological Image Processing.
24ECE151.5	Design image analysis techniques in the form of image segmentation evaluate the methodologies for Representation and Description.
24ECE151.6	Conduct independent study and analysis of Image Enhancement and Restoration techniques for real time applications.

Reference Books

Marks Marks Distribution for Assessment:

CIA (50)	Component	Description	Marks
	Written Test	● Total Number of Test: 3 ● Each Theory test will be conducted for 30 marks ● Average of 3 tests = 30 Marks	30
	Assignment	Average of 2 Assignments for 10 marks each	10
	AAT	Open ended experiments	10
Total Marks			50
SEA (50)	Component	Description	Marks
	Written Exam	Theory exam will be conducted for 100 marks and scaled down to 50 Marks The question paper will have 10 full questions each of 20 marks. Students have to answer 5 full questions	50
Total marks for the Course			100

Additional Assessment Tools (AAT) –Open ended experiments.

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS and Outcome Based Education (OBE))		
Semester: 5 th		
Course Name: Electromagnetic waves and transmission lines		Course Code: 24ECE152
L:T:P:J	2:2:0:0	CIA Marks:50
Credits:	3	SEA Marks:50
Hours/Week (Total)	4	SEA Duration:03 Hours
Pre-Requisites: Vector Calculus		
Course Learning Objectives: The students will be able to		
1	Understand the applications of Coulomb's law and Gauss law to different charge distributions and the applications of Laplace's and Poisson's Equations to solve real time problems on capacitance of different charge distributions.	
2	Understand the physical significance of Biot-Savart's and Ampere's Law for different current distributions	
3	Know the physical interpretation of Maxwell' equations and applications for Plane waves for their behavior in different media	
4	Acquire knowledge of Poynting Theorem and its application of Power flow.	
5	Understand the parameters of microwave transmission line and waveguides.	
Module-1: Laws of static electric field		No. of Hours
		Blooms Cognitive Levels
Vector Basics: Vector Algebra, Rectangular coordinate system, vector components and unit vectors, the dot product, the cross product, circular cylindrical coordinates, the spherical coordinate system. Coulomb's Law, Electric Field Intensity and Flux density Experimental law of Coulomb, Electric field intensity, Field due to continuous point charge distribution, Field of a line charge, Electric flux density Gauss's law and Divergence Gauss's law, Divergence. Maxwell's First equation (Electrostatics), Vector Operator ∇ and divergence theorem[Qualitative Analysis Only]		8
		Apply CO1
Module-2: Energy, Potential, Current and Current density , Poisson's, Laplace's Equations		
Energy, Potential and Conductors: Energy expended in moving a point charge in an electric field, The line integral, Definition of potential difference and potential, The potential field of point charge, Potential gradient. Current, Current density, Continuity of current. Poisson's and Laplace's Equations: Derivation of Poisson's and Laplace's Equations, Uniqueness theorem, Examples of the solution of Laplace's equation.		8
		Apply CO2
Module-3: Laws of Magneto-static fields and Time varying field		
Steady Magnetic Field: Biot-Savart Law, Ampere's circuital law, Curl, Stokes' theorem[Qualitative Analysis Only], Magnetic flux and magnetic flux density, Scalar and Vector Magnetic Potentials Faraday' law of Electromagnetic Induction –Integral form and Point form Maxwell's equations:Inconsistency of Ampere's law with continuity equation, displacement current, Maxwell's equations in point form and integral form.		8
		Apply CO3
Module-4: Uniform Plane Wave		

Handwritten signature

Uniform Plane Wave: Wave Propagation in free space, Derivation of General wave equations from Maxwell's equations, Relation between E and H, Solution of wave equation for free space and good conductor, wave propagation in free space and good conductor (γ , α , β , η) Skin effect or Depth of penetration, Poynting theorem.	8	Apply CO4
Module-5: Transmission lines		
Transmission Line equations and solutions, Reflection Coefficient and Transmission Coefficient, Standing Waves and Standing Wave Ratio, Smith chart- Properties and its applications.	8	Apply CO5

Course Outcomes: After completing the course, the students will be able to

24ECE152.1	Evaluate electrostatic forces and electric fields due to point, linear, and volume charge distributions using conventional methods, and apply Gauss's law and the Divergence theorem to determine electric fields for different charge configurations and volume charge distributions.
24ECE152.2	Determine the potential and energy associated with point charges and apply Laplace's equation to evaluate voltage functions and capacitance.
24ECE152.3	Apply Biot-Savart's and Ampere's laws for evaluating Magnetic field for different current configurations, Apply Maxwell's equations for time varying fields.
24ECE152.4	Apply Maxwell's equations for deriving the propagation of EM waves in free space and conductors and Evaluate power associated with EM waves using Poynting theorem.
24ECE152.5	Explain the propagation of RF signals through transmission lines and demonstrate an understanding of transmission line fundamentals.
24ECE152.6	Self-learning through listening and comprehension of audio / video lectures related to electro-magnetic fields and waves domain and understand the effects of E.M. waves with respect to Electromagnetic interference (EMI) and Electromagnetic Compatibility (EMC).

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS and Outcome Based Education (OBE))		
Semester: V		
Course Name: Computer Networks and Security Course Code: 24ECE153		
L: T: P: J	3 : 0 : 2 : 0	CIA Marks: 50
Credits:	4	SEA Marks: 50
Hours/Week (Total)	5	SEA Duration: 03 Hours
Pre-Requisites:		
Course Learning Objectives: The students will be able to		
1	Understand and apply fundamental principles of data communication, layered network architectures, and transmission media.	
2	Apply data link layer protocols and MAC techniques to design reliable and efficient local area networks.	
3	Analyze IP addressing schemes, routing algorithms, and network-layer protocols to manage and optimize data flow in complex networks.	
4	Apply and analyze transport and application layer services for end-to-end communication in modern networked systems.	
5	Apply core security principles and analyze threats to network infrastructure to recommend and implement appropriate security solutions.	
Module-1: Data communication and Physical Layer		No. of Hours
Data communication: Components, Data representation, Data flow. Networks: Network criteria, Physical Structures, Network types: LAN, WAN, Network Topologies, Switching techniques, the Internet. TCP/IP Protocol Suite, Layered Architecture, Layers in the TCP/IP Protocol Suite, Description of each Layer, Encapsulation and De-capsulation, Addressing, Multiplexing and De-multiplexing, OSI versus TCP/IP. Transmission media (guided and unguided), digital signals, bandwidth and throughput		10
		Apply CO1
Module-2: Data-Link Layer		
Data-Link Layer: Nodes and Links, Services, Two Categories of links, Sublayers, Link Layer addressing: Types of addresses, ARP. Data Link Control (DLC) services: Framing, Flow and Error Control, Data Link Layer Protocols: Simple Protocol, Stop and Wait protocol Wired and Wireless LANs: Ethernet Protocol, Standard Ethernet, Introduction to wireless LANs, Characteristics MAC Protocols: ALOHA, CSMA/CD, CSMA/CA		10
		Apply CO2
Module-3: Network Layer		
Network Layer: Introduction, Network Layer services: Packetizing, Routing and Forwarding, Packet Switching: Datagram Approach, Virtual Circuit Approach. IPV4 Addresses: Address Space, Classful Addressing, Classless Addressing, DHCP, Network Address Resolution Network Layer Protocols: Internet Protocol(IP) Routers, Gateways, Distance Vector Routing, Dijkstra's algorithm		10
		Apply CO3
Module-4: Transport Layer and Application Layer		
Transport Layer: Introduction, Transport Layer Services, Connectionless and Connection-oriented Protocols		10
		Apply CO4

Signature

Module-4: Transport-Layer Protocols in the Internet:		
User Datagram Protocol: User Datagram, UDP Services Transmission Control Protocol: TCP Services, TCP Features, Segment, Connection, State Transition diagram, Flow control, Error control, TCP congestion control Application Layer: Introduction, Services, Application - layer paradigms.	10	Apply CO5
Module-5: Network Security		
Network Security: Need for Security, Security Approaches, Principles of Security, Types of Attacks, Viruses and Related Threats, Need for Firewalls, Firewall Characteristics, Types of Firewalls, overview of IP security. Network Attacks: DoS, DDoS, Man-in-the-Middle, Phishing, Spoofing	10	Apply CO5

Lab Experiments	
1. Program to implement three nodes point – to – point network with duplex links between them.	
2. Program to implement transmission of ping messages/trace route over a network topology consisting of 6 nodes and find the number of packets dropped due to congestion.	
3. Program to implement an Ethernet LAN using n nodes and set multiple traffic nodes and plot congestion window for different source / destination.	
4. Program to construct simple LAN and understand the concept and operation of Address Resolution Protocol (ARP) using CISCO Packet Tracer.	
5. Program for simulation of distance vector routing algorithm.	
6. Program for simulation of link state routing algorithm.	
7. Program to analyze the performance of various configurations and protocols in LAN using CISCO Packet Tracer.	
8. Program to construct a Wireless LAN and make the PCs communicate wirelessly using CISCO Packet Tracer.	
9. Program to install and configure network interface card. Identify IP address of a work station, class of the address and configure the IP address on a work station. To share the hardware resources on a network.	
10. To configure a basic firewall in Cisco Packet Tracer using Standard Access Control Lists to restrict access from one network to another (e.g., block a specific host from accessing the server).	
Revision	
Lab assessment & evaluation	

Course Outcomes: After completing the course, the students will be able to	
24ECE153.1	Apply concepts of data communication and physical layer technologies to build and analyze small-scale network infrastructure.
24ECE153.2	Apply error and flow control mechanisms and analyze MAC protocols for both wired and wireless LANs.
24ECE153.3	Apply addressing and routing strategies to IP networks and analyze routing algorithms for optimal data transfer.
24ECE153.4	Apply transport and application layer functionalities to manage reliable data transmission and analyze connection-oriented communication using TCP.
24ECE153.5	Apply security principles to protect network systems and analyze various network attacks and corresponding defense mechanisms.
24ECE153.6	Discuss and analyze the various applications that can be implemented on networks.

Department of Electronics and Communication Engineering

SEMESTER – V

Course Name: Real Time Operating System

Course Code: 24ECE154

L: T: P: J	2 : 0 : 4 : 0	CIA Marks	50
Credits	4	SEA Marks	50
Total Number of Lecture Hours	50	SEA Duration	03 hours

Pre-Requisites: Operating Systems basics and C programming and Linux commands.

QNX Momentics Development Basics: Eclipse Basics, Targets, Projects and Source, Compiling, Exercise, Running and Debugging, Exercise and Versions.

QNX Neutrino RTOS Environment Setup

Objective: Install and configure QNX SDP, Momentics IDE, and target system (real or virtual). Outcome: Understand development workflow in QNX.

Course Learning Objectives:

This course will enable students to

- Understand the Architecture of QNX Neutrino RTOS and Develop Real-Time Applications
- Understand the working of QNX Development Tools (Momentics IDE)
- Able to Implement Process and Thread Management
- Understand the Master Inter-Process Communication (IPC)
- Debug and Optimize Embedded Systems

	Number of Hours	Bloom's Level
Module-1		
Introduction to QNX Real Time Operating System: Architecture – Executive, Microkernel, Inter process Communication, Processes and Threads model, Timing, Interrupt Handling, Scheduling, Boot Sequence, Security.	4	Apply (CO1)
Laboratory Component: Process Creation and Management Running and Debugging: Excercise Objective: Create and run hello world example on VM Ware virtual machine or Rasp-pi board. Outcome: Print hello world on panel of QNX Momentics IDE Objective: Write a program to create and manage multiple processes. Outcome: Demonstrate use of fork(), exec(), and wait() in QNX. Self-Study Component: Demonstrate how to Detect the termination of a child processes.	6	Apply (CO1, CO2)
Module-2		
Security Policies: Introduction to the use of security policies in securing a QNX system, Process Managers: System Library, Shared Objects, OS Services, Boot Sequence and Security.	4	Apply (CO2)

Processes, Threads & Synchronization: Introduction, Processes: Creation and Detecting termination, Threads, Process Termination and Cleanup,		
Laboratory Component: Thread Creation and Synchronization Processes - Detecting Termination: Exercise Synchronization - Mutexes: Solution to synchronization problems using Mutex Synchronization - Conditional Variables: Program in synchronization using Conditional Variables. Self-Study Component: Synchronization - Atomic Operations: Simple program solutions on Atomic operations	6	Apply (CO2)
Module-3		
Introduction to QNX Inter-Process Communication: Message Passing, Designing a Message Passing System (1): Pulses, Client Information Structure, How a Client Finds a Server, Multi-Part Messages. Comparing QNX IPC Methods: The Methods, How to Choose.	4	Understand (CO3)
Laboratory Component: Inter-Process Communication using Message Passing: Implement server-client IPC using MsgSend(), MsgReceive(), and MsgReply(). Programs to demonstrate IPC with pulses Programs to demonstrate IPC with multipart messages Self-Study Component: Assignment on Inter-Process Communication (IPC)	6	Apply (CO3, CO4)
Module-4		
QNX Inter-Process Communication: Issues Related to Priorities, Designing a Message Passing System (2): Event Delivery Shared Memory Introduction to Hardware Programming: Hardware I/O, Programming PCI bus devices, Handling Interrupts.	4	Apply (CO4)
Laboratory Component: Event Delivery: Program to demonstrate IPC – event delivery Shared Memory: Implement IPC using shared memory Self-Study Component: Handling Interrupts : Program on Interrupt handling	6	Apply (CO4)
Module-5		
Timers, Clocks and Timeouts: Introduction, Timing Architecture, Getting and Setting the System Clock, Introduction to Timers, High-Resolution Timers, Design Considerations, Kernel Timeouts. Build a QNX Neutrino Boot/OS Image: Introduction, Images & Buildfiles, Images & Buildfiles: Exercise option	4	Apply (CO5)

Resource Managers: Introduction, A Simple Resource Manager: Initialization and Handling read() and write().		
Laboratory Component: Timers: Program on timers Program to initialize Resource managers. Handling read() and write() - read()	6	Apply (CO5)
Self-Study Component: Implementation of Image building		
Course outcomes: The students will be able to - Understand the Architecture of QNX Neutrino RTOS and implement Real-Time Applications - Apply the working of QNX Development Tools (Momentics IDE) on Processes, Threads & Synchronization. - Implement the QNX Inter-Process Communication and compare QNX IPC Methods - Apply the QNX Inter-Process Communication with Hardware Programming and Interrupt handling - Understand the timing architecture, High-Resolution Timers, Images & Buildfiles and Resource Manager		
Reference Books: - Operating Systems: Design and Implementation - Andrej S Tanenbaum - The Linux Programming Interface- Michael Kerrisk

Semester:V

Course Name: Artificial Intelligence and Machine Learning Applications **CourseCode:24ECE155**

L:T:P:J	0:0:2:2	CIA Marks:50
Credits:	2	SEA Marks:50
Hours/Week(Total)	12 Lab sessions+12 sessions for project	SEA Duration:03Hours

Pre-Requisites: Linear Algebra Fundamentals and basics of MATLAB

Course Learning Objectives: The students will be able to

1	Introduce some concepts and techniques that are core to Artificial Intelligence and Machine Learning.
2	Understand Intelligent Systems, and problem solving.
3	Understand K-means clustering algorithms.
4	Acquire knowledge of Classification and Regression Techniques.
5	Identify and apply Machine Learning algorithms to solve real world problems.

Module1:Introduction to AI and ML	No. of Hours	Blooms Cognitive Levels/CO Mapping
Artificial Intelligence: History, Intelligent systems, foundation and sub Area of AI, applications, current trend and development of AI, Introducing to ML with MATLAB Program: 1. Write a MATLAB script to import an excel file by a.) Manual Method b.) Programmatic Method using in-built command as a table variable and display the summary of table 2. Perform Data Preprocessing and apply Classification- Navie Bayes on FeaturesPart1 dataset for Human Activity Recognition Using Sensor Data. (Use Classification learner app in MATLAB)	5	Apply CO1

Module2: Machine Learning Tool box

Machine Learning: Data Scrubbing, Different types of Learning: Supervised, Unsupervised and Reinforcement learning, Feature Selection. Program: 1. Write a MATLAB script to load the titanic dataset (Ref1) and use suitable functions to select the best features for predicting the survival status of a given passenger. 2. Preprocess and Explore Time-Stamped Data Using timetable and plot the results for Compare the data for July 4 to data for the rest of the month of July.	5	Apply CO2
--	----------	------------------

Module3: Clustering Algorithms

Introduction to Clustering algorithms, K-Means clustering algorithm Program: 1. Write a MATLAB script to perform data clustering. a.) Hard Clustering Algorithm b.) Soft Clustering Algorithm 2. Using “Bat Algorithm” perform the clustering operation using a suitable dataset.	5	Apply CO3
--	----------	------------------

Handwritten signature

Module4: Classification		
Introduction to Classification, Evaluation Metrics, MATLAB Implementation. Program: 1. Write a MATLAB script to develop a classifier model to predict the survival status of a passenger using titanic dataset 2. Write a MATLAB script to perform “Eigenvalue Classification” using “Wine” dataset.	5	Apply CO4
Module5: Regression		
Introduction to Regression, Evaluation Metrics, MATLAB Implementation. Program: 1. Write a MATLAB script to implement a Regression Model on a given Dataset 2. Perform Multivariate polynomial regression using a dataset, represent the results suitably.	5	Apply CO5
Mini-Project: One mini project to be completed in 12 lab sessions including its evaluation.		
Sample Mini-Projects		
1. Image Segmentation. 2. Sign Language Recognition System. 3. Game Playing Project. 4. Handwritten Character Recognition. 5. Bit coin Price Predictor. 6. Music Genre Classification. 7. Wine Quality Test. 8. Titanic Survival Prediction Project.		

Course Outcomes: After completing the course, the students will be able to	
24ECE155.1	Implement data importing and reading using MATLAB
24ECE155.2	Implement Feature Selection and Prediction using MATLAB
24ECE155.3	Design Clustering Algorithms for a given Problem Statement and a Dataset
24ECE155.4	Design a suitable Classification Algorithm for a given Problem Statement and a Dataset
24ECE155.5	Design a suitable Regression Algorithm for a given Problem Statement and a Dataset
24ECE155.6	Apply Machine Learning algorithms to solve real-world problems.

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS and Outcome Based Education (OBE))		
Semester: V		
Course Name: Smart Sensor Technologies		Course Code: 24ECE1561
L: T: P: J	3 : 0 : 0 : 0	CIA Marks: 50
Credits:	3	SEA Marks: 50
Hours/Week	3	SEA Duration: 03 Hours
Pre-Requisites: Basic Engineering Science		
Course Learning Objectives: The students will be able to		
1	To develop a foundational understanding of sensing principles and system integration for effective measurement and instrumentation in engineering applications.	
2	To equip students with the ability to apply the principles of tactile sensing in selecting and utilizing appropriate sensors for force, pressure, and touch-based applications.	
3	To enable students to apply the concepts of wireless sensor networks in designing and analyzing sensor node architecture, communication methods, and energy-efficient systems for real-world applications.	
4	To develop students to apply knowledge of smart sensor standards and emerging technologies in designing interoperable and future-ready sensing systems.	
5	To equip students with the ability to apply sensor technologies in diverse domains such as automotive, aerospace, healthcare, industry, and environmental monitoring.	
Module-1: Sensor Fundamentals		No. of Hours
		Blooms cognitive Levels
Introduction, Sensor Requirement in Smart Systems, Sensor Technologies for Smart Systems, <u>Sensor Systems</u> , <u>System Characteristics</u> , <u>Instrument Selection</u> , Sensors, Signals, and Systems, Sensor Classification, Units of Measurements Types of Sensors: Position, Acceleration, Strain, Load, Sound, Light, Voltage, Current, Flow, Temperature		8
		Understand CO1
Module-2: Advanced Tactile and Touch Sensor Systems		
Tactile Sensors: Switch Sensors, Piezoelectric Sensors, Piezoresistive Sensors, MEMS Sensors, Capacitive Touch Sensors, Acoustic Touch Sensors, Optical Sensors, Piezoelectric Force Sensors		8
		Apply CO2
Module-3: Wireless Sensor Networks: Principles and Applications		
Introduction to Wireless Sensor Network, Individual Wireless Sensor Node Architecture, Wireless Sensor Networks Architecture, Radio Options for the Physical Layer in Wireless Sensor Networks, Power Consideration in Wireless Sensor Networks, Applications of Wireless Sensor Networks: Structural Health Monitoring – Smart Structures, Industrial Automation Civil Structure Monitoring.		8
		Apply CO3
Module-4: Standards for Smart Sensing and The Next Phase of Sensing Systems		
Setting the Standards for Smart Sensors and Systems, IEEE 1451.1, IEEE 1451.2, IEEE P1451.3, IEEE P1451.4, Extending the System to the Network. The Next Phase of Sensing Systems: Future Semiconductor Capabilities, Future System Requirements, Software, Sensing, and the System, Alternative Views of Smart Sensing.		8
		Apply CO4
Module-5: Bio-Medical and Automotive Sensors		
Electrical Potentials and Propagation of Nerve Signals, Electrodes, EMG, ECG, EEG, Blood pressure, Engine temperature, Airflow, Combustion, Torque, Accelerometers, Gas composition sensors – Liquid level sensors.		8
		Understand CO5

Signature

Course Outcomes: After completing the course, the students will be able to	
24ECE1561.1	Students will be able to explain sensor operations, analyze system behavior, and select suitable instruments based on application requirements.
24ECE1561.2	Students will be able to apply the working concepts of tactile sensors to identify suitable sensor types and implement them in practical engineering scenarios.
24ECE1561.3	Students will be able to apply wireless sensor network principles to configure sensor nodes, choose suitable communication options, and implement solutions for monitoring and automation tasks.
24ECE1561.4	Students will be able to apply smart sensor interface standards and evaluate emerging trends to develop scalable and adaptable sensor network solutions.
24ECE1561.5	Students will be able to apply suitable sensors for specific application areas by analyzing functional requirements and operational environments.
24ECE1561.6	Students will be able to apply sensor-related concepts to select, configure, and implement appropriate sensors and systems for domain-specific applications, ensuring performance, interoperability, and efficiency.

Semester:			
Course Name: Mobile Communication and Processor			
Course Code: 24ECE1562			
L: T: P: J	3 : 0 :0 :3	CIA Marks: 50	
Credits:	3	SEA Marks: 50	
Hours/Week (Total)	3	SEA Duration: 03 Hours	
Pre-Requisites: Basics of Communication Basics of Electronics and Processors			
Course Learning Objectives: The students will be able to			
1	Understand the Concepts of Wireless Communication Systems		
2	Understand basic blocks of Mobile Phone		
3	Understand Software Architecture of Mobile Phone		
Module-1: Evolution of Wireless Communications Technology		No. of Hours	Blooms Ccognitive Levels
Introduction to wireless communications: Evolution of mobile radio communications, paging system, cordless telephone system, cellular telephone system, Modern wireless communication systems: 2G networks, 3G networks, Bluetooth and personal area networks. [Text 1: Chapter 1]		8	Understand CO1
Module-2: GSM System (2G) Overview			
Introduction, History of GSM, Overview of GSM Network Architecture, PLMN and Network operators, GSM Mobility and Roaming, GSM PLMN Services, GSM Interfaces, GSM Subscriber and Equipment Identity [Text 2: Chapter 6]		8	Understand CO2
Module-3: Anatomy of GSM Mobile Handset			
Introduction of GSM Handset, Functional Blocks Inside a GSM Mobile Phone, Hardware Block diagram of Mobile Phone, Antenna, Analog to Digital Conversion Module, Automatic Frequency Correction module, Loudspeaker, Microphone, Subscriber Identification Module, Application Processing Unit, Camera, LCD Display, Keypad, Connectivity Modules, Battery, Clocking Scheme, Memory. [Text 2: Chapter 10]		8	Understand CO3
Module-4: GSM Mobile Phone Software Design			
Introduction to GSM Mobile Handset Software, Operating System Software, Device Driver Software, GSM System Protocol Software, Speech and Multimedia Application Software [Text 2: Chapter 8]		8	Understand CO4
Module-5: Next Generation Mobile Phones			
Introduction, 3GPP LTE, LTE System Design, IEEE802.16 System, 4G Mobile System, Key Challenges in Designing 4G Mobile System and Research Areas, Cognitive Radio. [Text 2: Chapter 16]		8	Understand CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE1562.1	Understand the different generation wireless communication technology
24ECE1562.2	Understand the basic GSM System operation
24ECE1562.3	Understand the Hardware architecture of mobile phone
24ECE1562.4	Understand the software architecture of mobile phone
24ECE1562.5	Understand the requirements of Next Generation Wireless Communication Technologies
24ECE1562.6	Troubleshoot the hardware and software issue in a basic mobile phone

SEMESTER – V

REAL TIME OPERATING SYSTEM

Course Code : 24ECE1563

Credits	3	CIA Marks	50
Teaching Hours/Week (L: T: P: J)	3 :0:0:0	SEA Marks	50
Total Number of Lecture Hours	40	Exam Hours	03

Course Learning Objectives:

This course will enable students to

- Understand the Architecture of QNX Neutrino RTOS and Develop Real-Time Applications
- Understand the working of QNX Development Tools (Momentics IDE)
- Able to Implement Process and Thread Management
- Understand the Master Inter-Process Communication (IPC)
- Debug and Optimize Embedded Systems

Pre-Requisites: Operating Systems basics and C programming and Linux commands.

QNX Momentics Development Basics: Eclipse Basics, Targets, Projects and Source, Compiling, Exercise, Running and Debugging, Exercise and Versions.

QNX Neutrino RTOS Environment Setup

Objective: Install and configure QNX SDP, Momentics IDE, and target system (real or virtual).

Outcome: Understand development workflow in QNX.

	Number of Hours	Bloom's Level
Module-1		
Introduction to QNX Real Time Operating System: Architecture – Executive, Microkernel, Inter process Communication, Processes and Threads model, Timing, Interrupt Handling, Scheduling, Boot Sequence, Security.	8	Apply (CO1)
Module-2		
Security Policies: Introduction to the use of security policies in securing a QNX system, Process Managers: System Library, Shared Objects, OS Services, Boot Sequence and Security. Processes, Threads & Synchronization: Introduction, Processes: Creation and Detecting termination, Threads, Process Termination and Cleanup,	8	Apply (CO2)
Module-3		
Introduction to QNX Inter-Process Communication: Message Passing, Designing a Message Passing System (1): Pulses, Client Information Structure, How a Client Finds a Server, Multi-Part Messages. Comparing QNX IPC Methods: The Methods, How to Choose.	8	Understand (CO3)
Module-4		
QNX Inter-Process Communication: Issues Related to Priorities, Designing a Message Passing System (2): Event		Apply

Delivery Shared Memory Introduction to Hardware Programming: Hardware I/O, Programming PCI bus devices, Handling Interrupts.	8	(CO4)
Module-5		
Timers, Clocks and Timeouts: Introduction, Timing Architecture, Getting and Setting the System Clock, Introduction to Timers, High-Resolution Timers, Design Considerations, Kernel Timeouts. Build a QNX Neutrino Boot/OS Image: Introduction, Images & Buildfiles, Images & Buildfiles: Exercise option Resource Managers: Introduction, A Simple Resource Manager: Initialization and Handling read() and write().	8	Apply (CO5)
Course outcomes: The students will be able to • Understand the Architecture of QNX Neutrino RTOS and implement Real-Time Applications • Apply the working of QNX Development Tools (Momentics IDE) on Processes, Threads & Synchronization. • Implement the QNX Inter-Process Communication and compare QNX IPC Methods • Apply the QNX Inter-Process Communication with Hardware Programming and Interrupt handling • Understand the timing architecture, High-Resolution Timers, Images & Buildfiles and Resource Manager

Semester: V			
Course Name: Embedded System Design Using Raspberry Pi		Course Code: 24ECE1564	
L: T: P: J	3 : 0 : 0 : 0	CIA Marks: 50	
Credits:	3	SEA Marks: 50	
Hours/Week (Total)	3	SEA Duration: 03 Hours	
Pre-Requisites: Microprocessor/Microcontroller, Python Basics.			
Course Learning Objectives: The students will be able to			
1	Gain the knowledge of knowledge of hardware software co-design		
2	Understand the firmware approaches design and development and its applications		
3	Understand the embedded product development life cycle and its trends in embedded industry.		
4	Understand the working principle of Raspberry Pi board and interfacing peripherals.		
5	Identify sensor technologies for sensing real world entities and to control Arduino using Raspberry pi		
Module-1: Hardware Software Co-Design		No. of Hours	Blooms cognitive Levels
Fundamental Issues in Hardware Software Co-Design, Computational Model in Embedded Design, Introduction to Unified Modelling Language, Hardware Software Trade Offs		8	Understand CO1
Module-2: Embedded Firmware Design, Development & Its Applications			
Embedded Firmware Design Approaches, Embedded Firmware Development Languages, High Level Language Based Development, Applications: Washing Machine- Application Specific, Automotive: Domain Specific.		8	Apply CO2
Module-3: Embedded Product Development Life Cycle & Trends in Embedded Industry			
Different Phases of EDLC, EDLC Approaches(Modeling the EDLC), Processor Trends in Embedded Systems, Embedded OS Trends, Development Language Trends, Open Standard, Frameworks and Alliances, Bottlenecks, Development Platform Trends, Cloud, Internet of Things and Embedded Systems- The next big thing.		8	Understand CO3
Module-4: Introduction to Raspberry Pi and its Applications			
Introduction to Raspberry Pi, Features of Raspberry Pi, Introduction to Raspberry Pi architecture, Pin Details, Memory, Raspberry Pi Applications, Raspberry Pi based Motor Speed Control, Auto Intensity Control using Raspberry Pi		8	Understand CO4
Module-5: Interfacing Arduino and Peripherals with Raspberry Pi			
Interfacing Raspberry Pi to sensors and output devices: LED, Buzzer, DHT11 sensors, Ultrasonic sensors, communicating with Arduino by using the Serial Monitor, Custom Communication with Arduino over I2C.		8	Understand CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE1564.1	Develop the hardware software co-design for an Embedded Systems
24ECE1564.2	Develop the embedded firmware design
24ECE1564.3	Demonstrate the embedded product development life cycle and its trends in embedded

	Assignment	1 Assignment for 10 marks	10
	AAT	Open ended experiments, Presentations on interfacing peripherals with Raspberry Pi	10
Total Marks			50
SEA (50)	Component	Description	Marks
	Written Exam	Theory exam will be conducted for 100 marks and scaled down to 50 Marks. The question paper will have 10 full questions each of 20 marks. Students have to answer 5 full questions	50
Total marks for the Course			100

Additional Assessment Tools (AAT) – Quiz, Presentations, Term Paper, Open ended experiments, Mini Projects, Two-minute video on latest topic, Short MOOC courses

B N M Institute of Technology

An Autonomous Institution under VTU

Department of Training & Placement Syllabus

Course Name: Employability Skills (Technical)-1

Class: V Semester

Course Objectives: This course will enable students to

- ability to understand fundamentals of trending technologies currently used in the industry.
- understand the importance of professional etiquettes.
- to be prepared for group discussions and various modes of interviews.
- to solve company simulated aptitude and technical question papers related to campus recruitments.

Module	Topics to be covered	No of Hours
Introductory Courses	Data Science (Data Analytics & Visualization), Cyber Security, Industrial Automation 4.0, & IOT, AWS, & Cloud Computing	10 Hours
Personality & Grooming Training	Dressing & Group Discussion Etiquettes, Interview Skills, Resume Building(should include introduction to Github, Hackerrank, LeetCode, Codechef), Email & Telephone Etiquettes, Social Media Etiquettes, & LinkedIn Profiling.	6 Hours
Interview Preparation Training	<u>Pre-Preparation Formalities</u> • Training session on Pre-Preparation formalities of Campus Selection should be conducted Job Profiles analysis must be done. • Understanding the salary breakups & other perks, researching about the Company and the work culture through their websites & other digital platforms like Glassdoor & LinkedIn. • Rewriting resumes keeping the job profiles in view.	

Signature

	<u>Group Discussion & Personal Interview</u> Pre-Placement Talk, Mock GD & Personal Interview training sessions for each individual student should be conducted by the Industry Experts and they should brief students on the area of improvements, presentation & behavioral skills required during the campus selection process.	
Assessment Tests	Company Specific Aptitude and Technical Tests	6 Hours

Course Outcome: (CO)

By end of the course the students will be able to:

- analyze the problem and solve it within the allocated time span.
- apply the professional etiquettes during the recruitment drives.
- implement the techniques and skills during the group discussions and various interview skills.

CO-PO/PSO Mapping:

CO No.	Statement	Bloom's Cognitive level	POs
1	analyze the problem and solve it within the allocated time span.	Apply	PO1, PO2 & PO12
2	apply the professional etiquettes during the recruitment drives.	Analyze	PO1, PO2 & PO12
3	implement the techniques and skills during the group discussions and various interview skills.	Analyze	PO1, PO2 & PO12

Assessment processes:

	Components	Description	Marks
CIA (100)	Continues Evaluation	Students to be evaluated on: - Mock G.D. - Interview- Offline and Online - Resume	50
	Written / Online Test	<u>Total Tests: 03</u> - Assessments with 75 minutes duration & 50 marks each - Average score of 50 Marks from 3 tests will be considered for the final score	50
	Total Marks for the Course		100

BNM Institute of Technology

Autonomous Engineering College Under VTU

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS and Outcome Based Education (OBE))		
Semester: VI		
Course Name: Engineering Project Management and Finance Course Code: 24ECE161		
L: T: P: J	2:0:0:0	CIA Marks: 50
Credits:	2	SEA Marks: 50
Hours	25	SEA Duration: 03 Hours
Pre-Requisites: -		
Course Learning Objectives: The students will be able to		
1	Indicate the importance of project management for engineering projects.	
2	Define project processes and project success measures.	
3	Understand what constitutes project scheduling and plan for the execution of the project by breaking into manageable work units.	
4	Gain knowledge and develop curiosity on latest technology trends in Project management.	
5	Appreciate the various financial estimates and projections in projects.	
Module-1: Project Management		No. of Hours
Overview of Project Management: Project Definition, Project related concepts, Need for Project Managers, Essential Elements of Project, Speaking the language of Project Management, Project, People skill in Project Management, Success criteria Roles and Responsibilities of Project Managers: The Project Manager’s Functions, Process Functions of Project Managers, Characteristics of an Effective Project Manager		5
		Blooms Cognitive Levels Apply CO1
Module-2: Project Planning: The Schedule		
Benefits of Planning and Scheduling, The Planning and Scheduling Process Developing the Work Breakdown Structure, Key Facts About Developing a WBS, The WBS Dictionary, Enterprise Environmental Factors, Estimating Activity Duration and Sequencing Activities, Displaying the Project Schedule, The CPM Network Diagram, Scheduling Software and Combined Schedule Formats		5
		Apply CO2
Module-3: Project Planning: The Risk Management Plan		
Risk Management: Definition, classification of Risk factors, Risk as it relates to project success criteria, Risk identification process, qualitative and quantitative risk analysis, quantitative risk analysis tools.		5
		Apply CO3

Signature

Module-4: Financial Estimates and Projections		
Cost of Project, Means of Finance, Estimates of Sales and Production, Cost of Production, Working Capital Requirement and Its Financing	5	Apply CO4
Module-5: Financing Of Projects		
Capital Structure, Menu of Financing, Internal Accruals, Equity Capital, Preference Capital, Debentures (Or Bonds), Term Loans	5	Apply CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE161.1	Develop the ability to manage teams, resolve conflicts, and drive projects toward successful completion.
24ECE161.2	Use Project Management Tools and processes to track and control projects.
24ECE161.3	Assess how various risk factors impact project success criteria such as cost, schedule, quality and performance
24ECE161.4	Identify various sources of financing available for projects and evaluate their suitability.
24ECE161.5	Differentiate between equity and preference capital and evaluate its role in financial structuring.
24ECE161.6	Demonstrate the concepts of project processes based on success criteria and tools through interactive problem-solving exercises.

B.N.M. Institute of Technology

An Autonomous Institution under VTU

**B.E. (Electronics and Communication Engineering)
Choice Based Credit System (CBCS and Outcome Based Education (OBE))**

Semester: VI			
Course Name : Microwave & Antennas		Course Code: 24ECE162	
L: T:P: J	3:0:2:0	CIA Marks: 50	
Credits:	4	SEA Marks: 50	
Hours/week(Total)	50 hrs	SEA Duration: 03 Hours	
Pre-Requisites: Electromagnetic waves and transmission lines fundamentals			
Course Learning Objectives: The students will be able to			
1	Apply the knowledge of fields and waves to develop concepts of transmission line theory.		
2	Describe the basic operation of microwave devices.		
3	Describe the radiation from isolated, linear wire antennas and from linear elements near or on a conducting surface.		
4	Calculate the fundamental parameters for antennas and the radiation field from an antenna.		
Module-1: Microwave Waveguides & S- Parameters			
Microwave Waveguides : Introduction, TE, TM waves Rectangular waveguides (qualitative analysis TE, TM modes), group velocity phase velocity, and wave impedance, Microwave cavities (qualitative analysis), resonant frequency. S-parameters: Introduction, properties of S matrix (qualitative analysis)		No. of Hrs	Bloom's Cognitive Levels
		10	Apply CO1
Module-2: Microwave Devices			
Microwave Sources: Klystron Oscillator, Magnetron, TWT amplifiers. Microwave Passive Devices: Waveguide Tee's, Directional couplers, circulators, power divider, Faraday Isolator, Phase shifters (Rotatory type), Attenuators (Rotatory type).		10	Apply CO2
Module-3: Antenna Basics and Electric Dipoles			
Antenna Basics : Introduction, antenna radiation mechanism, basic Antenna parameters, patterns, beam area, radiation intensity, beam efficiency, Directivity and gain, antenna apertures, effective height, bandwidth, radiation, efficiency, antenna temperature and antenna field zones. Electric dipoles: Introduction, short electric dipole (Directivity, radiation resistance).		10	Apply CO3
Module-4: Point Sources & Thin linear Antenna			

Mahesh

Point Sources: Introduction, Point Sources, Power Theorem, Arrays of two isotropic point sources, Linear Arrays of n Isotropic Point Sources of equal Amplitude and Spacing. Thin Linear Antenna: Directivity and Radiation Resistance	10	Apply CO4
Module-5: Antenna Types		
Printed Antennas: Introduction to Printed Antennas, Omnidirectional Microstrip Antenna, Stripline Fed Tapered Slot Antenna, Rectangular Microstrip Fed Slot Antenna. Milimeter Wave Antennas: Parabolic Dish Antenna, Log Periodic Antenna, Monopole Antennas, Lens Antennas	10	Apply CO5

Practical Experiments	
Sl. No	Experiments
1	Measurement of frequency, guide wavelength, power, VSWR and attenuation in microwave test bench.
2	Obtain the Radiation Pattern and Measurement of directivity and gain of microstrip dipole and Yagi antennas.
3	Determination of Coupling and isolation characteristics of microstrip directional coupler.
4	Determination of Resonance characteristics of microstrip ring resonator and computation of dielectric constant of the substrate.
5	Determination of Power division and isolation of microstrip power divider.
6	Simulate Broadside array, End-Fired array of Dipole Antenna and to plot the Radiation pattern.
7	Simulate Linear array(Uniform) Antenna and plot the Radiation pattern
8	Simulate Dipole Antenna and plot the Radiation pattern
9	Simulate and calculate Phase and group velocity(X- band) waveguide at 9GHz
10	Simulate Rectangular Waveguide propagation modes.
Course Outcomes: After completing the course, the students will be able to	
23ECE162.1	Develop generation and propagation of RF signals using Microwave oscillators through transmission line.
23ECE162.2	Compute the performance parameters and S-Matrix of microwave passive devices by applying the network/field concepts.
23ECE162.3	Determine various antenna parameters for building an RF system.
23ECE162.4	Develop expressions for field intensity of a given antenna / an array of antennas. (Point sources, dipole, thin linear antenna)
23ECE162.5	Select suitable antenna configuration according to specific applications.
23ECE162.6	Illustrate the benefits and hazards of microwave radiation to human health, environment, and society.

B.N.M. Institute of Technology

An Autonomous Institution under VTU

Semester: VI			
Course Name : VLSI Design		Code: 24ECE163	
L: T:P: J	3:0:2:0	CIA Marks: 50	
Credits:	4	SEA Marks: 50	
Hours	5(50)	SEA Duration: 03 Hours	
Pre-Requisites: KVL & KCL, MOSFET fundamentals, Digital electronics			
Course Learning Objectives: The students will be able to			
1	Learn MOS transistor theory and CMOS technologies		
2	Learn the operation principles and analysis of inverter and logic circuits		
3	Design combinational, sequential and dynamic logic circuits as per the requirements		
4	Design memory SRAM, DRAM, ROM		
5	Demonstrate the concepts of Static Timing Analysis and CMOS testing		
Module -1: CMOS Logic Fundamentals			
Brief History, VLSI Design Flow, MOS Transistors V-I Characteristics, Non-Ideal characteristics, CMOS Logic Inverter DC Characteristics. Different Logic gates by truth table. Laboratory Experiment 1: I- V Characteristics of n- MOSFET and p MOSFET Using Cadence Tool. Laboratory Experiment 2: Inverter Characteristics Pre-layout Using Cadence Tool.		No. of Hrs	Bloom's Cognitive Levels
		10	Apply CO2
Module -2: CMOS Fabrication and CMOS Delays			
CMOS Fabrication and lay out, Layout design rules, Scaling – Constant voltage, Constant field, MOSFET Capacitances without derivations, Transient Characteristics of Inverter, RC Delay, Linear Delay model. Laboratory Experiment 3: Inverter Post layout simulation Using Cadence Tool. Laboratory Experiment 4: CMOS NAND gate Design, Pre and Post layout simulation Using Cadence Tool.		10	Apply CO2
Module-3: Combinational Logic Circuits			
Logical effort of paths and transistor sizing Combinational logic design Circuit families, - Static, Ratioed, CVSL, Dynamic logic, - Comparison of Performance parameters. Laboratory Experiment 5: 4 Bit adder Timing analysis, Slack calculation Using Cadence Tool. Laboratory Experiment 6: 4 Bit ALU - Timing analysis, Slack calculation.		10	Apply CO3
Module-4: Sequential logic circuits and Semiconductor memories			
Sequential logic circuits, Sequencing methods and timing, Latches and flipflops		10	Apply CO4

Signature

Semiconductor Memories Memory architecture, SRAM 6T DRAM 1T Laboratory Experiment 7: 4 Bit Up- down counter - Timing analysis, Slack calculation Using Cadence Tool. Laboratory Experiment 8: 6T SRAM Characterization – demonstration Using Cadence Tool.				
Module–5: STA and Verification				
STA Concepts Timing arcs, Maximum and minimum timing path, Critical path, Clock domain crossing. Verification Logic Verification principles, Testing Manufacturing Test Principles, Design for Testability, Built in Self-test, MBIST Laboratory Experiment 9: Estimation of Path delay and Setup and Hold time analysis for any RTL with predefined clock frequency Using Cadence Tool. Laboratory Experiment 10: Insert Scan chain for a given RTL and analyze Using Cadence Tool.			10	Analyze CO5
Lab Experiments				
Sl. No.	NOTE: EDA tools with Custom circuit design flow and RTL Design flow to be used			
1	I- V Characteristics of n- MOSFET and p MOSFET			
2	Inverter Characteristics Pre-layout			
3	Inverter Post layout simulation			
4	CMOS NAND gate Design, Pre and Post layout simulation			
5	4 Bit adder Timing analysis, Slack calculation			
6	4 Bit ALU - Timing analysis, Slack calculation			
7	4 Bit Up- down counter - Timing analysis, Slack calculation			
8	6T SRAM Characterization – Demonstration			
9	Estimation of Path delay and Setup and Hold time analysis for any RTL with predefined clock frequency.			
10	Insert Scan chain for a given RTL and analyze.			

Course Outcomes: After completing the course, the students will be able to	
24ECE163.1	Demonstrate understanding of MOS transistor theory, CMOS fabrication flow and technology scaling
24ECE163.2	Design the basic gates using the stick and layout diagrams for physical design and estimate sheet resistance and delays.
24ECE163.3	Compute the logic delay and path delay based on logical effort and path effort single stage and Multistage network.
24ECE163.4	Apply simulation techniques and design practices to observe, identify, and troubleshoot timing-related issues in latches, flip-flops, and memory circuits under real-time constraints.
24ECE163.5	Analyze timing consideration in Memory elements, Verification methodologies and Testing issues in VLSI Design.
24ECE163.6	Analyze an RTL design with timing and power constraints and bring up the physical design for the chosen RTL with EDA tools.

Module-3: Inheritance, Interfaces & Packages.																							
Inheritance: Defining an Inheritance, Types of Inheritance, Constructor in subclass, Method Overriding, super keyword, abstract keyword, final keyword. Interfaces & Packages: Defining an Interface, Implementing an Interface,	5	Apply CO3																					

Difference between Interface & Classes, Extending a Interface, Usage of Package, Classpath, Importing a Package. Programs: 7. Write a program to generate the resume. Create 2 Java classes Teacher (data: personal information, qualification, experience, achievements) and Student (data: personal information, result, discipline) which implements the java interface Resume with the method biodata (). 8. Develop a java application to implement currency converter (Dollar to INR, EURO to INR, Yen to INR and vice versa), distance converter (meter to KM, miles to KM and vice versa), time converter (hours to minutes, seconds and viceversa) using packages		
Module-4: Multithreading & IO Programming		
Multithreading: Multi Threaded Programming: What are threads? How to make the classes threadable ; Extending threads; Implementing runnable; Synchronization. IO Programming: Introduction to Stream, Byte Stream, Character stream, Readers and Writers, File Class, File InputStream, File Output Stream, InputStreamReader. Programs: 9. Write a Java program that implements a multi-thread application that has three threads. First thread generates a random integer for every 1 second; second thread computes the square of the number and prints; third thread will print the value of cube of the number.	5	Apply CO4
Module-5: Exceptions		
Exceptions: Definition of Exception, Classification of Exception, Structure of Try & catch block, Error Vs Exception, Throw Keyword, Throws Keyword, Finally Keyword, Custom Exception. Programs: 10. Write a Java program to read two integers a and b. Compute a/b and print, when b is not zero. Raise an exception when b is equal to zero. 11. Write a Java program to demonstrate the String functions for the following - Append - add at end - Insert – add at particular index - Search - List all string starts with given letter	5	Apply CO5
List of Sample Projects		
- Airline Reservation System - Electricity Billing System - Library Management System - Online Bank Management System - e-Healthcare Management System - Online Quiz Management System - Stock Management System - Weather Report Application - Telephone Billing System - Currency Converter		

Course Outcomes: After completing the course, the students will be able to	
24ECE164.1	Use Eclipse/NetBeans IDE to design, develop, debug Java Projects
24ECE164.2	Analyze the necessity for Object Oriented Programming paradigm over structured programming and become familiar with the fundamental concepts in OOP.
24ECE164.3	Demonstrate the ability to design and develop java programs, analyze, and interpret object oriented data and document results
24ECE164.4	Apply the concept of Multithreading and IO programming for Java Program applications
24ECE164.5	Apply the concepts of exception/event handling, abstraction to develop robust programs.
24ECE164.6	Develop a Project using JAVA using the concepts

Course Name: Information Theory & Coding		Course Code: 24ECE1651	
L: T: P: J	3: 0: 0: 0	CIA Marks: 50	
Credits:	3	SEA Marks: 50	
Hours	40	SEA Duration: 03 Hours	
Pre-Requisites: Set theory, Discrete mathematics, Probability theory and Statistics			
Course Learning Objectives: The students will be able to			
1	Understand the concept of Entropy, Rate of information and order of the source with reference to dependent and independent source.		
2	Study various source encoding algorithms.		
3	Model discrete & continuous communication channels.		
4	Study Various Error Control Coding Algorithms		
Module-1: INFORMATION THEORY		No. of Hours	Blooms Cognitive Levels
Introduction: Block Diagram for Digital Communication, Measure of information, Information content of message, Average Information content of symbols in Long Independent sequences, Markov Statistical Model of Information Sources, Average Information content of symbols in Long dependent sequences, Entropy of Markoff Sources, Information rate of Markoff Sources		08	Analyse CO1
Module-2: SOURCE CODING			
Encoding of the Source Output, Shannon’s Encoding Algorithm, Shannon Fano Encoding Algorithm, Source coding theorem, Prefix codes, Kraft McMillan Inequality property – KMI, Huffman Codes & Extended Huffman coding		08	Apply CO2
Module-3: : DISCRETE INFORMATION CHANNELS			
Introduction to Discrete Communication Channels, Channel Matrix, Joint probability Matrix, Binary Symmetric Channel, System Entropies, Mutual Information, Channel Capacity, Channel Capacity of Binary Symmetric Channel and Binary Erasure Channel		08	Apply CO3
Module-4: ERROR CONTROL CODING			
Introduction to Error Control Coding, Examples, Methods of Controlling Errors, Types of Errors, Types of Codes, Linear Block Codes: matrix description of Linear Block Codes, Error Detection and Error Correction Capabilities of Linear Block Codes, Single Error Correcting Hamming Codes. Binary Cyclic Codes: Algebraic Structure of Cyclic Codes, Systematic and Non Systematic form, Encoding using an (n-k) Bit Shift register, Syndrome Calculation, Error Detection and Correction		08	Analyse CO4
Module-5: CONVOLUTIONAL CODES			
Convolution Encoder, Time domain approach, Transform domain approach, State Diagram, Code Tree, Trellis Diagram, The Viterbi Algorithm.		08	Apply CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE1651.1	Calculate Symbol rate, Self-Information, Entropy and Information Rate as a measure of Information for memory less and dependent sources.
24ECE1651.2	Develop efficient representation of data generated by discrete information source.
24ECE1651.3	Analyze discrete channels using joint, conditional, and mutual entropies of variables in terms of their coupled probabilities.
24ECE1651.4	Develop reliable codes for data on imperfect communication channels.
24ECE1651.5	Apply concept of convolutional codes to carry out encoding and decoding operations.
24ECE1651.6	Relate the basics of Information Theory & coding to find solutions for practical problems in terms of storage and secured communication

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS and Outcome Based Education (OBE))		
Semester: 6		
Course Name: Nanoelectronics		Course Code: 24ECE1652
L: T: P: J	3: 0:0:0	CIA Marks: 50
Credits:	3	SEA Marks: 50
Hours/Week (Total)	3	SEA Duration: 03 Hours
Pre-Requisites:		
Course Learning Objectives: The students will be able to		
1	Describe nanotechnology with basic fabrication methods for nanostructures.	
2	Describe the classification of characterization methods.	
3	Describe the various fabrication techniques and physical processes.	
4	Discuss the applications of semiconductor nanostructures	
Module-1: Introduction		No. of Hours
Introduction: Overview of nanoscience and engineering. Development milestones in microfabrication and electronic industry. Moore's law and continued miniaturization, Classification of Nanostructures, Electronic properties of atoms and solids: Isolated atom, Bonding between atoms, Giant molecular solids, Free electron models and energy bands, crystalline solids, Periodicity of crystal lattices, electronic conduction.		8
		Understand CO1
Module-2: Fabrication methods and techniques		
Fabrication methods: Top-down processes, Bottom up processes methods for templating the growth of nanomaterials, ordering of nanosystems. Fabrication techniques: requirements of ideal semiconductor, epitaxial growth of quantum wells, lithography and etching, cleaved-edge over growth, growth of vicinal substrates, strain induced dots and wires, electrostatically induced dots and wires, Quantum well width fluctuations, thermally annealed quantum wells, semiconductor nanocrystals, colloidal quantum dots, self-assembly techniques. (Text 1).		8
		Understand CO2
Module-3: Characterization		
Characterization: General considerations for imaging, Image magnification and resolution, other considerations for imaging, Light microscopy, Classification, Microscopic techniques, Field ion microscopy, scanning probe techniques, diffraction techniques: bulk and surface diffraction techniques. The characterization of semiconductor nanostructures-Optical and electrical characterization, Structural characterization.		8
		Understand CO3
Module-4: Inorganic semiconductor nanostructures		
Inorganic semiconductor nanostructures: overview of semiconductor physics. Quantum confinement in semiconductor nanostructures: quantum wells, quantum wires, quantum dots, super-lattices, band offsets, electronic density of states, Modulation doping, The quantum Hall effect, Resonant tunnelling, Charging effects.		8
		Understand CO4
Module-5: Applications of semiconductor nanostructures		
Applications of semiconductor nanostructures: Injection lasers, quantum cascade lasers, single-photon sources, biological tagging, optical memories, coulomb blockade devices, photonic structures.		8
		Understand CO5

Handwritten signature

Course Outcomes: After completing the course, the students will be able to	
24ECE1652.1	Explain the overview and classification of nanostructures.
24ECE1652.2	Explain the top-down and bottom-up fabrication methods and fabrication techniques involved.
24ECE1652.3	Explain Image magnification and microscopic techniques used in characterization.
24ECE1652.4	Explain the Inorganic semiconductor nanostructures with doping and charge effects.
24ECE1652.5	Explain the applications of nano sensors, injection lasers and analyze the effects of nanotechnology applications

Semester: VI			
Course Name: Wearable Technology		Course Code: 24ECE1653	
L: T: P: J	3 :0 :0 :0	CIA Marks: 50	
Credits:	3	SEA Marks: 50	
Hours	40	SEA Duration: 03 Hours	
Prerequisites:			
Course Learning Objectives: The students will be able to			
1	Identify and understand the need for development of wearable devices and its influence on various sectors.		
2	Explore the smart fabrics and their applications in wearable devices.		
3	Familiarize the characteristics, working principle and application of special purpose transducers		
4	Introduce the adoption of wearable and non-invasive assistive technologies for wearable devices.		
5	Provide a basic understanding of evolution of IoT and its functional modules.		
Module-1: Wearables: Fundamentals, advancements and roadmap for the future		No. of Hours	Blooms Cognitive Levels/CO Mapping
World of Wearables, Role of Wearables, Attributes of Wearables, Textiles and clothing: The meta-wearable, Challenges and opportunities. Soft Mechanical and Biochemical Sensors: Mechanical sensors, Biochemical sensors, Tears, Saliva, Wound and interstitial fluids.		8	Understand CO1
Module-2: Smart Fabrics			
Introduction. Sensor design, physiological basis and sensor placement, electrical contacts and interconnections for smart garments. Textile integration and design of functional garments, functional evaluation. Woven Electronic textiles: Introduction, Textiles, Applications: Touchpad, Textile switch, Textile electrodes, Device-embedded textiles.		8	Understand CO2
Module-3: Pressure and Flow Sensors			
Concepts of Pressure, Units of Pressure, Mercury Pressure sensors, Bellows, membranes and thin plates, Piezoresistive sensors, capacitance sensors, VRP sensors, optoelectronic pressure sensors, indirect pressure sensor, vacuum sensors. Basics of flow dynamics, thermal transport sensors, ultrasonic sensors, electromagnetic sensors, breeze sensor, Dust and smoke detectors.		8	Understand CO3
Module-4: Wearable and Non-invasive assistive technologies			
Assistive devices for individuals with severe paralysis: Sip-n-puff, Head controllers, Eye tracking systems, Electromyography (EMG)-based controllers, Voice controllers, Brain-Computer interfaces (BCI), Tongue-operated devices, Wireless tracking of tongue motion, Wearable Tongue Drive System, Sensor Signal processing algorithm, Multimodal Tongue Drive System, Clinal assessment.		8	Understand CO4
Module-5: Wearables to THINKables: Data Analytics and Machine Learning			
Remote health monitoring using wearable sensors, AI enabled sensors, challenges of AI-enabled sensors in health, future directions. Data analytics for wearable IoT based telemedicine: introduction, need and		8	Understand CO5

demand of wearables technologies in the society, smart glove design, signal processing pipeline: from sensor signals to classifications		
Course Outcomes: After completing the course, the students will be able to		
24ECE1653.1	Identify and understand the need for development of wearable devices and its influence on various sectors.	
24ECE1653.2	Identify the integration of smart fabrics and wearable devices.	
24ECE1653.3	Understand the working principle of special purpose sensors and the need for developing smart sensors.	
24ECE1653.4	Explore the role of wearable and non-invasive assistive technologies for wearable devices	
24ECE1653.5	Explain and identify AI based wearable applications.	
24ECE1653.6	Describe and perform the experiments on the sensors and wearable devices.

Choice Based Credit System (CBCS and Outcome Based Education (OBE))

Semester: VI

Course Name: Artificial Neural Networks

Course Code: 24ECE1654

L: T: P: J	3 : 0 : 0 : 0	CIA Marks: 50
Credits:	3	SEA Marks: 50
Hours	40	SEA Duration: 03 Hours

Pre-Requisites: Basic knowledge of calculus, linear algebra, probability theory and programming

Course Learning Objectives: The students will be able to

1	Understand the basics of ANN and comparison with Human brain
2	Demonstrate knowledge on Generalization and function approximation and various architectures of building an ANN
3	Get knowledge of supervised, unsupervised and reinforcement learning using neural networks

Module-1	No. of Hours	Blooms Cognitive Levels
Introduction: Biological Neuron – Artificial Neural Model - Types of activation functions – Architecture: Feedforward and Feedback, Convex Sets, Convex Hull and Linear Separability, Non-Linear Separable Problem. Xor Problem, Multilayer Networks. Learning: Learning Algorithms, Error correction and Gradient Descent Rules, Learning objective of TLNs, Perceptron Learning Algorithm, Perceptron Convergence Theorem.	8	Apply CO1
Module-2		
Supervised Learning: Perceptron learning and Non Separable sets, α -Least Mean Square Learning, MSE Error surface, Steepest Descent Search, μ -LMS approximate to gradient descent, Application of LMS to Noise Cancelling, Multi-layered Network Architecture, Backpropagation Learning Algorithm, Practical consideration of BP algorithm.	8	Apply CO2
Module-3		
Support Vector Machines and Radial Basis Function: Learning from Examples, Statistical Learning Theory, Support Vector Machines, SVM application to Image Classification, Radial Basis Function Regularization theory, Generalized RBF Networks, Learning in RBFNs, RBF application to face recognition.	8	Apply CO3
Module-4		
Attractor Neural Networks: Associative Learning Attractor Associative Memory, Linear Associative memory, Hopfield Network, application of Hopfield Network, Brain State in a Box neural Network, Simulated Annealing, Boltzmann Machine, Bidirectional Associative Memory.	8	Apply CO4
Module-5		
Self-organization Feature Map: Maximal Eigenvector Filtering, Extracting Principal Components, Generalized Learning Laws, Vector Quantization, Self-organization Feature Maps, Application of SOM, Growing Neural Gas.	8	Apply CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE1654.1	Understand artificial neural model and its architectures.
24ECE1654.2	Apply steepest descent, LMS algorithm and Backpropagation algorithm
24ECE1654.3	Apply support vector machines to classify images.
24ECE1654.4	Understand attractor neural networks and its applications.
24ECE1654.5	Apply self-organization feature maps.
24ECE1654.6	Understand the role of neural networks in engineering, artificial intelligence, and cognitive modelling and be able to apply the concepts of ANN to real world applications.

Semester: VI

Course Name: Computer Architecture and Organisation **Course Code: 24ECE1655**

L: T: P: J	3 : 0 : 0 : 0	CIA Marks: 50
Credits:	3	SEA Marks: 50
Hours	40	SEA Duration: 03 Hours

Pre-Requisites: Digital Logic solving, Number System

Course Learning Objectives: The students will be able to

1	Explain the basic sub systems of a computer, their organization, structure and operation
2	Illustrate the concept of programs as sequences of machine instructions
3	Demonstrate different ways of communicating with I/O devices
4	Describe memory hierarchy and concept of virtual memory
5	Illustrate organization of simple pipelined processor and other computing systems

Module-1:	No. of Hours	Blooms Cognitive Levels
Basic Structure of Computers: Computer Types, Functional Units, Basic, Operational Concepts, Bus Structures, Software, Performance – Processor Clock, Basic Performance Equation Machine Instructions and Programs: Numbers, Arithmetic Operations and Characters, IEEE standard for Floating point Numbers, Memory Location and Addresses, Memory Operations, Instructions and Instruction Sequencing	8	Understand CO1
Module-2:		
Addressing Modes, Assembly Language, Basic Input and Output Operations, Stacks and Queues, Subroutines, Additional Instructions.	8	Apply CO2
Module-3:		
Input/Output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Controlling Device Requests, Direct Memory Access	8	Apply CO3
Module-4:		
Memory System: Basic Concepts, Semiconductor RAM Memories- Internal organization of memory chips, Static memories, Asynchronous DRAMS, Read Only Memories, Cash Memories, Virtual Memories, Secondary Storage-Magnetic Hard Disks	8	Apply CO4
Module-5:		
Basic Processing Unit: Some Fundamental Concepts, Execution of a Complete Instruction, Multiple Bus Organization, Hardwired Control, Microprogrammed Control	8	Understand CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE1655.1	Explain the basic organization of a computer system.
24ECE1655.2	Explain the different addressing modes and assembly language instructions.
24ECE1655.3	Explain different ways of accessing an input / output device including interrupts.
24ECE1655.4	Illustrate the organization of different types of semiconductor and other secondary storage memories.
24ECE1655.5	Illustrate simple processor organization based on hardwired control and micro programmed control.
24ECE1655.6	Analyze the architecture and performance issues in different processor families.

Dept. of Electronics and Communication Engineering Choice Based Credit System (CBCS) and Outcome Based Education (OBE)		
Semester: 6		
Course Name:	NANOTECHNOLOGY	Course Code: 24ECE1671
L: T: P: J	3:0:0:0	CIA Marks: 50
Credits:	3	SEA Marks: 50
Hours	40	SEA Duration: 03 Hours
Pre-Requisites:		
Course Learning Objectives: The students will be able to		
1	Understand basics of nanomaterials and their properties.	
2	Describe synthesis of nanomaterials by chemical techniques.	
3	Learn to analyze and assess parameters involved in synthesis and characterization.	
4	Compare models involved in synthesis of nanostructures.	
Module-1: Introduction		No. of Hours Blooms Cognitive Levels
Introduction: introduction to nanoscience and nanotechnologies, importance and scope of nanotechnology, Development milestones in microfabrication and electronic industry. Moore's law and continued miniaturization, natural nanomaterials, properties at nanoscale (physical, chemical, surface, electrical, magnetic, optical, mechanical), Classification of Nanostructures, Kinetics in Nanostructured Materials.		8 Understand CO1
Module-2: Types of Nanomaterials and synthesis		
Types of Nanomaterials (Quantum dots, Nanoparticles, Nanocrystals, Dendrimers, Buckyballs, Nanotubes); Synthesis of Nanomaterials- top down and bottom up approach, Ball Milling, Gas, liquid, and solid –phase synthesis of nanomaterials; Lithography techniques (Photolithography, Dip-pen and Electron beam lithography); Thin film deposition; Electrospinning. Bio-synthesis of nanomaterials.		8 Apply CO2
Module-3: Characterization of Nano materials		
Microscopy-Scanning tunnelling microscope, Atomic force microscope, scanning electron microscopy, Field Emission Scanning Electron Microscopy, transmission electron microscopy, Environmental Scanning Electron Microscopy (ESEM) High Resolution Transmission Electron Microscope (HRTEM), Surface enhanced Raman Spectroscopy, X-ray diffraction technique, X ray Photoelectron Spectroscopy Surface area analysis, particle size analysis, gravimetric analysis.		8 Apply CO3
Module-4: Nano Structures		
Carbon Nanotubes, Fullerenes, Nanowires, Quantum Dots. Applications of nanostructures. Reinforcement in Ceramics, Drug delivery, Giant magnetoresistance, etc. Cells response to Nanostructures.		8 Apply CO4
Module-5: Application of Nanotechnology		
Nano electronics, Nano sensors, Nanotechnology in Diagnostics applications, Environmental and Agricultural Applications of nanotechnology, Nano technology for energy systems.		8 Understand CO5

Handwritten signature

Course Outcomes: After completing the course, the students will be able to	
24ECE1671.1	Identify various nano materials and describe the basic science behind the properties of materials.
24ECE1671.2	Explain the types and methods of nanomaterial synthesis.
24ECE1671.3	Interpret the creation and characterization of nanoscale materials.
24ECE1671.4	Apply principles of nano materials in describing nanostructures.
24ECE1671.5	Comprehend the applications of nanotechnology at the leading edge of scientific research Apply their knowledge of nanotechnology to identify how they can be exploited for new applications.

L: T: P: J	3 :0 :0 :0	CIA Marks: 50
Credits:	3	SEA Marks: 50
Hours	40	SEA Duration: 03 Hours

Pre-Requisites:

Course Learning Objectives: The students will be able to

1	Understand and Identify the need for development of wearable devices and its influence on various sectors.
2	To provide the basic understanding of measurement and instrumentation systems and the insight of the resistive sensors and its applications in real life.
3	To familiarize the characteristics, working principle and application of special purpose transducers
4	Acquaint the usage of wearable devices as assistive devices, diagnostic devices and other modern applications.
5	To impart the importance of smart sensors, sensor interface standards for wearable device applications and to provide a brief overview of the wearable technology and its impact on social life

Module-1: Wearables: Fundamentals, advancements and roadmap for the future

No. of Hours

Blooms Cognitive Levels

World of Wearables, Role of Wearables, Attributes of Wearables, Textiles and clothing: The meta-wearable, Challenges and opportunities.
Wearing sensors for disease detection: introduction, cardiovascular diseases, neurological diseases, gastrointestinal diseases

8

Understand CO1

Module-2: Sensors, Actuators and low-power electronics

Mechanical sensors, Biochemical sensors, tears, saliva, wound and interstitial fluids. Biopotential signals and their characteristics, electrode-body interface and electrode noise, Low-power ADCs for biomedical applications, architectural design for low power biopotential acquisition.

8

Understand CO2

Module-3: Pressure and Flow Sensors

Concepts of Pressure, Units of Pressure, Mercury Pressure sensors, Bellows, membranes and thin plates, Piezoresistive sensors, capacitance sensors, VRP sensors, optoelectronic pressure sensors, indirect pressure sensor, vacuum sensors.

Basics of flow dynamics, thermal transport sensors, ultrasonic sensors, electromagnetic sensors, breeze sensor, Dust and smoke detectors

8

Apply CO3

Module-4: Smart Fabrics

Introduction. Sensor design, physiological basis and sensor placement, electrical contacts and interconnections for smart garments. Textile integration and design of functional garments, functional evaluation, Woven electronic textile applications

8

Understand CO4

Module-5: Wearables to THINKables: Data Analytics and Machine Learning

Remote health monitoring using wearable sensors, AI enabled sensors, challenges of AI-enabled sensors in health, future directions

Data analytics for wearable IoT based telemedicine: introduction, need and demand of wearables technologies in the society, smart glove design, signal processing pipeline: from sensor signals to classifications

08

Understand CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE1672.1	Identify and understand the need for development of wearable devices and its influence on various sectors.
24ECE1672.2	Understand the wearable devices for detection of biochemical and physiological body signals
24ECE1672.3	Apply the knowledge of sensors to develop suitable special purpose sensors for wearables and the need for developing smart sensors
24ECE1672.4	Acquaint the usage of wearable devices as assistive devices, diagnostic devices and other modern applications.
24ECE1672.5	Understand the usage of Machine Learning and Data analytics in wearables
24ECE1672.6	Analyze the different low cost smart wearables from different companies- case study

History, Robots, Robot Usage, Robot Subsystems, Classification of Robots, Industrial Applications	8	Understand CO1
Module-2: Actuators and Grippers		
Electric Actuators, Hydraulic Actuators, Pneumatic Actuators, Selection of Motors, Grippers	8	Understand CO2
Module-3: Sensors, Vision and Signal Conditioning		
Sensor Classification, Internal Sensors, External Sensors, Vision, Signal Conditioning.	8	Understand CO3
Module-4: Programming of Robots		
Robot Programming: Methods of Robot Programming, Lead through Programming Methods, A Robot Program as a Path in Space, Motion Interpolation, Wait, Signal, and Delay Commands, Branching, Robot Language Structure.	8	Understand CO4
Module-5: Robot Applications in Manufacturing		
General Considerations in Robot Material Handling, Material Transfer Applications, Machine Loading and Unloading, Processing Applications: Spot Welding, Continuous Arc Welding, Spray Coating	8	Understand CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE1673.1	Understand the evolution and basics of robotic systems.
24ECE1673.2	Understand various actuators used in robotic applications.
24ECE1673.3	Understand the working of various sensors used in robotic applications
24ECE1673.4	Understand the Robot programming and its languages
24ECE1673.5	Interface hardware and software for building robots
24ECE1673.6	Develop robots for societal applications

B.N.M. Institute of Technology

B.E. (Electronics and Communication Engineering)
Choice Based Credit System (CBCS and Outcome Based Education (OBE))

Semester: VI			
Course Name: Automotive Electronics		Course Code: 24ECE1674	
L: T: P: J	3 : 0 :0 :0	CIA Marks: 50	
Credits:	3	SEA Marks: 50	
Hours	40	SEA Duration: 03 Hours	
Pre-Requisites: Control Systems, Internet of Things, Electronic Circuits, Digital System Design			
Course Learning Objectives: The students will be able to			
1	Understand the basics of automobile dynamics and design electronics to complement those features. ·		
2	Understand principle of working of sensors and actuators used in automobiles for control		
3	Design and implement the electronics that attribute the reliability, safety, and smartness to the automobiles, providing add-on comforts.		
Module-1: Automotive Fundamentals Overview		No. of Hours	Blooms Cognitive Levels/CO Mapping
Automotive Fundamentals Overview Evolution of Automotive Electronics, Automobile Physical Configuration, Survey of Major Automotive Systems, The Engine - Engine Block, Cylinder Head, Four Stroke Cycle, Engine Control, Ignition System- Spark plug, High voltage circuit and distribution, Spark pulse generation, Ignition Timing, Diesel Engine, Drive Train - Transmission, Drive Shaft, Differential, Suspension, Brakes, Steering System, Starter Battery- Operating principle. The Basics of Electronic Engine Control- Motivation for Electronic Engine Control- Exhaust Emissions, Fuel Economy, Concept of an Electronic Engine control system, Definition of General terms, Definition of Engine performance terms, Engine mapping, Effect of Air/Fuel ratio, spark timing and EGR on performance, Control Strategy, Electronic Fuel control system, Analysis of intake manifold pressure, Electronic Ignition.		8	Understand CO1
Module-2: Automotive Sensors			
Automotive Sensors Automotive Control System applications of Sensors and Actuators - Variables to be measured, Airflow rate sensor, Strain Gauge MAP sensor, Engine Crankshaft Angular Position Sensor, Magnetic Reluctance Position Sensor, Hall effect Position Sensor, Shielded Field Sensor, Optical		8	Understand CO2

Crankshaft Position Sensor, Throttle Angle Sensor (TAS), Engine Coolant Temperature (ECT) Sensor, Exhaust Gas Oxygen (O ₂ /EGO) Lambda Sensors, Piezoelectric Knock Sensor.		
Module-3: Digital Engine Control Systems		
Digital Engine Control Systems Digital Engine control features, Control modes for fuel Control (Seven Modes), EGR Control, Electronic Ignition Control -Closed loop Ignition timing, Spark Advance Correction Scheme, Integrated Engine Control System- Secondary Air Management, Evaporative Emissions Canister Purge, Automatic System Adjustment, System Diagnostics.	8	Understand CO3
Module-4: Automotive Networking		
Automotive Networking - Bus Systems- Classification, Applications in the vehicle, Coupling of networks, Examples of networked vehicles Buses - CAN Bus, UN Bus, MOST Bus, Bluetooth, Flex Ray, Diagnostic Interfaces.	8	Understand CO4
Module-5: Automotive Diagnostics		
Automotive Diagnostics- Timing Light, Engine Analyser, On-board diagnostics, Off-board diagnostics, Expert Systems, Occupant Protection Systems - Accelerometer based Air Bag systems. Future Automotive Electronic Systems- Alternative Fuel Engines, Electric and Hybrid vehicles, Fuel cell powered cars, Collision Avoidance Radar warning Systems, Low tire pressure warning system, Heads Up display, Speech Synthesis, Navigation - Navigation Sensors - Radio Navigation, Signpost navigation, dead reckoning navigation, Voice Recognition Cell Phone dialling, Advanced Cruise Control, Stability Augmentation, Automatic driving Control	8	Understand CO5

Course Outcomes: After completing the course, the students will be able to	
24ECE1674.1	Acquire an overview of automotive components, subsystems, and basics of Electronic Engine Control in today's automotive industry
24ECE1674.2	Understand the automotive sensors and actuators for interfacing with microcontrollers / microprocessors during automotive system design.
24ECE1674.3	Understand the fundamentals of digital engine control systems in today's automotive industry.
24ECE1674.4	Understand the networking of various modules in automotive systems, communication protocols and diagnostics of the sub systems.
24ECE1674.5	Understand the importance of automotive diagnostics and get fair idea on future Automotive Electronic Systems
24ECE1674.6	Understanding the design of the electronics that attribute the reliability, safety, and smartness to the automobiles, providing add-on comforts.

BNM Institute of Technology

Syllabus for Employability Skills-2

SEMESTER – VI

Subject Name	Employability Skills-2 (Technical)	Weekly Assignments(6 tests)	Max 10 Min 4
Subject Code	22XXX168	Evaluation on Resume Building & Etiquettes	Max 10 Min 4
Number of Contact Hours/Week	2	Evaluation on Group Discussion & Personal Interviews	Max 15 Min 6
		Final Company Specific Assessment	Max 15 Min 6
Total Number of Contact Hours	24	Credits	1
Industry Readiness hands on Courses (12 hrs)	Tableau and Power BI, Cloud Computing & AWS - fundamental AWS concepts related to compute, database, storage, networking, monitoring, and security with AWS hands-on course experiences		
	Industrial Automation 4.0		
	Competitive Coding		
Personality & Grooming Training (2hrs)	Dressing & Group Discussion Etiquettes, Interview Skills, Resume Building (should include introduction to Github, Hackerrank, LeetCode, Codechef), Email & Telephone Etiquettes, Social Media Etiquettes, & LinkedIn Profiling.		
Interview Preparation Training (2hrs)	<u>Pre-Preparation Formalities</u> • Training session on Pre-Preparation formalities of Campus Selection should be conducted Job Profiles analysis must be done. • Understanding the salary breakups & other perks, researching about the Company and the work culture through their websites & other digital platforms like Glassdoor & LinkedIn. • Rewriting resumes keeping the job profiles in view. Group Discussion & Personal Interview		

Maheshwari

	Pre-Placement Talk, Mock GD & Personal Interview training sessions for each individual student should be conducted by the Industry Experts and they should brief students on the area of improvements, presentation & behavioural skills required during the campus selection process.
MOCK RECRUITMENT PROCESS (2hrs)	Aptitude test, Coding test, Group Discussions, Personal Interviews by industry personnel,
	Feedback to be shared to each student,
	Shadowing done by students during interviews to learn better.

Mocking
